Top Identified Public Health Hazards

reported by Health Jurisdiction
July 2015 - June 2016

59% Severe Weather

57% Flood

53% Wildfire

53% Hazardous Material Release

31% Communicable Disease

16% Other Natural Disaster

8% Contaminated Water

8% Other

51 local health jurisdictions worked with local emergency planners to identify their top three public health hazards.
We compiled them above. Below, the top three by ranking overall.

Depicted are the most frequent responses by rank from 1st - 3rd.

Reviewing and ranking current threats with preparedness partners is important for planning and renewing public health's role in emergency management.
