

## Healthy Montana Families Home Visiting Program

The Healthy Montana Families (HMF) home visiting program provides voluntary, family-centered services in the home to pregnant women and families with infants and children under the age of six. Home visiting services target at-risk families and support the following:

- Healthy pregnancy outcomes
- Parent education
- Positive child health and development
- Strengthening parent-child relationships
- Referrals to community resources

## Models

HMF supports the implementation of four evidence-based home visiting models. Providers participating in the program offering these models provide voluntary, family-centered services in the home to pregnant women and families with infants and children under the age of six. The four primary models are:

- Parents as Teachers (a 24-month model)
- Nurse Family Partnership (a 27-to-30-month model)
- Family Spirit (a 36-to-40-month model)
- SafeCare Augmented (a 6-to-12-month model)

## Funding

HMF is funded primarily through the Maternal Infant and Early Childhood Home Visiting (MIECHV) federal funding in combination with state special and general funds.

## Local Implementing Agencies

HMF supports 18 home-visiting local implementing agencies in 16 counties, including two tribal reservations. In federal fiscal year 2022, 906 family households received 1-2 home visits per month.
