# Guide to Use of Manual

The protocols contained in this manual are minimum medical standards as mandated by the Federal Title X Guidelines and/or the State Department of Public Health and Human Services, and must be incorporated into each local program's plan of medical care. The Manual has been prepared for use by State and local staff involved in administering the Statewide Family Planning Program and is divided into several sections, one for each area of the program.

The protocols contained here are subject to change as new information becomes available. As changes occur, they will be forwarded for addition to the manual. Please send suggested revisions on clarity or content to the Montana Family Planning Program.
