### ***Practicing Medicine in the Digital World: Ohio's Telepsychiatry Project for Intellectual Disability***

*Wednesday, October 28, 2015*

1:00 - 2:30 p.m. Eastern

Join ANCOR to hear from one of the prime architects and clinicians of a program that exemplifies ANCOR's commitment to foster innovation and advance community participation and independence through the use of technology.

**Ohio's Telepsychiatry Project** was initiated in January 2012 to provide specialized services to individuals with co-occurring mental illness and intellectual disability who live in outlying communities that lack the infrastructure and resources to offer the highest quality care. Three years later, over 500 patients with IDD from 52 counties receive mental health treatment through this statewide grant-funded project. The project fosters innovation and the use of virtual software for the provision of the highest quality mental health care to individuals in the state with the most complex needs.

**Julie P. Gentile, M.D.**, Professor of Psychiatry at Wright State University, will take us through the logistics of developing and funding the program, initial bumps and challenges on the road to implementation, answer your questions and help you explore whether telepsychiatry could be an effective tool for the individuals you support.

#### Presenter:

**Julie P. Gentile, M.D.**

*Professor and Director, Intellectual Disability Psychiatry*  
Wright State University

#### Registration:

ANCOR members \$69

Non-members \$129
