

## Our Mission

The mission of the Montana State Environmental Laboratory is to deliver quality analytical services in support of Montana's efforts in preserving a healthy environment

- Perform efficient, quality environmental analyses
- Provide comprehensive private well testing
- Provide consultation and certification services to laboratories analyzing drinking water samples
- Provide guidance and consultation regarding the technical and legal requirements for environmental analyses to other labs
- Provide intergovernmental coordination and cooperation in the area of environmental testing
- Improve capacity and preparedness for response to public emergencies

State of Montana programs working together for the health of Montana families and our natural resources

Highest Quality Service  
And Integrity For All  
Your Testing Needs

# Environmental Analytical Services

## Analyses include:

- Private well screens
- Hydraulic fracturing baseline testing
- Pesticides
- Nutrients
- Metals
- Industrial chemicals
- Volatile organics
- Oxygen demand
- Solids
- Mercury
- Water microbiology
- Herbicides
- Lead in paint and dust wipes

## Matrices tested include:

- Water
- Wastewater
- Groundwater
- Sediment
- Solid wastes

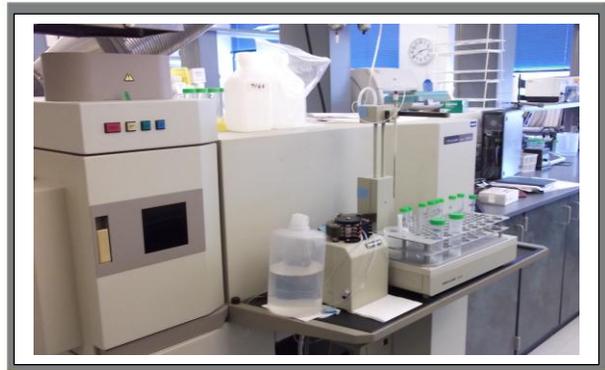

The highly trained scientific staff of the Montana State Environmental Laboratory is available to partner with you to determine the most cost effective approach that satisfies your analytical needs.

Please don't hesitate to contact us and take advantage of our consultative services.

## The Montana State Environmental Laboratory Difference

- **Highly trained and experienced staff of professional scientists**
- **Newly remodeled laboratory equipped with state-of-the-art precision analytical instruments**
- **Responsiveness to customer needs**
- **Electronic reports to meet customer needs**
- **Consolidated billing**

Certified by Region 8 of the EPA

Perform testing/analyses to support:

- Safe Drinking Water Act (SFWA)
- Clean Water Act (CWA)
- National Pollutant Discharge Elimination Systems (NPDES)
- Clean Air Act (CAA)
- Non-regulated monitoring

Member of Laboratory Response Network

- CDC-designated Level 2 chemical response laboratory
- Perform testing for human exposure to identified threat agents
- Provide sampling supplies, collection guidance, and analytical support for first responders, such as HazMat and Civil Support Team.
