PUBLIC HEALTH LABORATORY

LABORATORY SERVICES MANUAL

Updated June 2017
MONTANA LABORATORY SERVICES BUREAU

1400 BROADWAY
W. F. COGSWELL BUILDING
1400 E. Broadway, P.O. BOX 4369
HELENA, MONTANA 59604-4369

CLIA ID. # 27D0652531

PHONE: 406-444-3444
800-821-7284 (24 hour)

MAIN FAX: 406-444-1802

*******************************************************************************

LABORATORY SERVICES BUREAU LEADERSHIP

Laboratory Services Bureau Chief,
Ron Paul, 444-5559 or rpaul@mt.gov

Laboratory Systems Improvement Section Supervisor and Deputy Laboratory Director
Deborah Gibson 444-5970 or debgibson@mt.gov

*******************************************************************************

LABORATORY SERVICES BUREAU SUPERVISORS

Laboratory Business Operations Manager,
Danielle Lindeman, 444-5246 or DLindeman@mt.gov

Serology & Newborn Screening Laboratory Manager, Angela Dusko,
444-3040 or adusko@mt.gov

Micro & Molecular Laboratory Manager,
Carrie Biskupiak, 444-5526 or cbiskupiak@mt.gov

Environmental Laboratory Supervisor,
Russ Leu, 444-5259 or rleu2@mt.gov

*******************************************************************************

For most up-to-date contact information and testing information, see our website:
http://dphhs.mt.gov/publichealth/LaboratoryServices
The Eleven Core Functions of Public Health Laboratories (courtesy of APHL)

1. Disease Prevention, Control and Surveillance—Provide accurate and precise analytical data in a timely manner

2. Integrated Data Management—Serve as the conduit for scientific data and information in support of public health programs

3. Reference and Specialized Testing—Serve as centers of excellence using their expertise, reference and resources in the areas of biological, chemical and radiologic issues of public health importance

4. Environmental Health and Protection—Collaborate with partners to coordinate and ensure scientific analysis of environmental and human samples to identify, quantify and monitor potential threats to health

5. Food Safety—Collaborate in the detection, monitoring and response to food safety issues

6. Laboratory Improvement and Regulation—Provide leadership for laboratory improvement in areas of public health importance

7. Policy Development—Play a role in the development of state and federal health policy

8. Public Health Preparedness and Response—Fulfill a key partnership role in local, state and national disaster preparedness and response

9. Public Health Related Research—Engage in research to improve and expand the scientific and policy bases of public health laboratory practice and assure their optimal application in support of the public health system

10. Training and Education—Facilitate access to training and education

11. Partnerships and Communication—Support their respective state public health laboratory systems

The Montana Laboratory Services Bureau and its sentinel laboratories are part of the CDC’s Laboratory Response Network (LRN)

LRN Mission: The LRN and its partners will maintain an integrated national and international network of laboratories that are fully equipped to respond quickly to acts of chemical or biological threats, emerging infectious diseases, and other public health threats and emergencies.

Sentinel laboratories play a key role in the early detection of biological agents. Sentinel laboratories provide routine diagnostic services, rule-out, and referral steps in the identification process. While these laboratories may not be equipped to perform the same tests as LRN reference laboratories, they can test samples.
Montana Sentinel Laboratories

“In the broadest sense, all laboratories capable of analyzing or referring specimens or samples that may contain microbial agents, biological toxins, chemical agents, chemical agent metabolites, or radiological agents function as sentinels in the public health laboratory system. This includes environmental, food, veterinary, agriculture, military, public health and clinical laboratories. Because of their routine activities, all of these laboratories have the potential to encounter samples that may contain agents that threaten the public’s health. While all of these laboratories are considered to be sentinel laboratories, they may have different roles within the public health laboratory system.

Role of Sentinel Clinical Laboratories in the Public Health Laboratory System
Clinical laboratories testing human and animal samples are often the first interface with patients and the public health system. These laboratories perform a variety of critical tests, providing timely results to impact patient care. Optimally, these laboratories also work with local and state health departments to provide information on nationally notifiable diseases and other threats. While reporting of nationally notifiable diseases to the Centers for Disease Control and Prevention (CDC) is not federally mandated, it is currently required by legislation or regulation at the state or local levels. As such, the list of reportable diseases varies slightly by jurisdiction. Ongoing communications and trainings from public health staff, including laboratorians and epidemiologists, help to assure that clinical laboratories are integrated into the public health laboratory system. This coordination is vital to the surveillance and responses for endemic and emerging pathogens, including identification of novel threats such as pandemic influenza and the development of appropriate countermeasures such as vaccines.

Role of Sentinel Clinical Laboratories in the LRN for Biological Threat Preparedness
In addition to their broad role in the public health laboratory system, clinical laboratories work closely with local and state public health and federal laboratories to recognize potential biological threat agents and other emerging threats to public health. Such laboratories are part of the nation’s Laboratory Response Network (LRN) founded by the CDC, the Federal Bureau of Investigation (FBI) and the Association of Public Health Laboratories (APHL). The strength of the LRN lies in its standardized approach and its tiered capability construct—with sentinel clinical laboratories serving at the foundation to quickly recognize, rule out or refer potential biothreat agents to the LRN Reference Laboratories.” (excerpt taken from “Definition of LRN Sentinel Laboratories” on the ASM website)

We would like to recognize Montana’s 18 sentinel laboratories for serving in this role:

Benefis East Health Services, Great Falls  
Big Horn County Memorial Hospital, Hardin  
Billings Clinic, Billings  
Bozeman Health, Bozeman  
Clark Fork Valley Hospital, Plains  
Community Medical Center, Missoula  
Frances Mahon Deaconess Hospital, Glasgow  
Glendive Medical Center, Glendive  
Holy Rosary Hospital, Miles City

IHS Fort Belknap Hospital, Harlem  
Kalispell Regional Hospital, Kalispell  
Madison Valley Hospital, Ennis  
Livingston Memorial Hospital, Livingston  
Sidney Health Center, Sidney  
St. Patrick’s Hospital, Missoula  
St. Peter’s Hospital, Helena  
St. Vincent’s Hospital, Billings  
VA Medical Center, Ft. Harrison, Helena

For more information on sentinel laboratories and rule-out testing, see the American Society for Microbiology website, https://www.asm.org/index.php/guidelines/sentinel-guidelines
Laboratory Outreach

The Montana Laboratory Services Bureau offers not only testing, but also consultation and outreach in a number of different areas.

One of our most recent outreach programs is biosafety. The Ebola crisis of 2014 revealed that, on a national level, there are gaps in laboratory biosafety programs. Measures that can be put in place to protect ourselves and the public from laboratory acquired infections include risk assessments, standardized training, and non-punitive systems for reporting incidents and near misses, to name a few. The Association of Public Health Laboratories, with funding by the CDC, has developed tools and provided training and other programs to enhance biosafety in each state. Public Health laboratories have been tasked with passing these resources on to clinical partners in their jurisdictions. Part of our outreach is to provide copies of our newly updated Laboratory Services Manual.

Please contact our program managers and subject matter experts for any assistance you may need. If you need assistance with a topic not listed below, please give one of us a call, and we can find someone to help.

For assistance with biosafety, packaging and shipping, biopreparedness training, jurisdictional transport plans (county level), Harvest Webstation accounts, and Portacount requests or technical assistance, contact: Biosafety Officer and Laboratory Training Specialist, Crystal Fortune, 444-0930 or cfortune@mt.gov

For assistance with biopreparedness, jurisdictional sample transport plans (county level), CAP LPX facility feedback, and sentinel laboratory outreach, contact: Bioterrorism Specialist, Lana Moyer, 444-0944 or lmoyer@mt.gov

For assistance with chemical terrorism preparedness, including rapid toxic screening questions or training, contact: Chemical Terrorism Specialist, Joel Felix, 444-9653 or jfelix@mt.gov

For assistance with Harvest Webstation or Copia, contact: Data Coordinator, Kim Varvel, 444-4115 or kvarvel@mt.gov

For assistance with laboratory safety/biosafety; quality assurance, including rapid HIV/HCV; and Portacount requests, contact: Quality Assurance and Safety Specialist, Donna Jo Hosmer, 444-5941 or dhosmer@mt.gov
Clinical Testing List of Services For most up-to-date manual, refer to our website. For tests not listed, please contact the laboratory (800-821-7284) for availability.

*****************************************************************************

Summary of Changes:

- *Bartonella spp.* culture removed
- *Borrelia burgdorferi* Western Blots are now referred to SD Public Health Laboratory (previously sent to CDC)
- Chlamydia trachomatis and *Neisseria gonorrhoeae* by NAAT performed Monday, Wednesday, Friday
- Replace HIV1/HIV2 Multispot with HIV1/HIV2 Geenius
- Added Hep B post-vaccination panel for infants born to Hepatitis B-infected women
- HIV1/HIV2 Geenius is referred to ND Public Health Laboratory
- Mumps IgM, Rubella IgM, Rubeola IgM are referred to ND Public Health Laboratory
- *Coxiella burnetii* PCR added
- Ebola Virus PCR added
- Chikungunya, Dengue, and Zika (triplex) PCR information added

*****************************************************************************

*****************************************************************************

**Note:** To avoid rejection, *all patient specimens should be clearly marked with two identifiers (name, DOB, medical record number, etc.) and collection date.* Additionally, specimens should be submitted, with absorbent material, inside a biohazard transport bag and the corresponding requisition in the outer pouch of the transport bag. Please do not submit more than one patient or more than one specimen type (example, culture and blood) per transport bag or allow requisitions to be in contact with specimens. *Call the laboratory (800) 821-7284 with any questions regarding safe transport.*

*****************************************************************************
# Table of Contents

Tests in Alphabetical Order .......................................................................................................................... 14

**A** ......................................................................................................................................................... 14

Acid Fast Bacilli (AFB) (see Mycobacterium spp.) ...................................................................................... 14

*Actinomyces spp.* Culture Isolation/ Identification (see Bacterial Culture, Anaerobic) .......................... 14

Adenovirus Culture (see Respiratory Virus Culture) .................................................................................... 14

Adenovirus Direct Detection by Real Time PCR ....................................................................................... 14

Amebiasis Detection (see Ova and Parasite Exam) .................................................................................. 14

Anthrax (see *Bacillus anthracis*) .............................................................................................................. 14

Antimicrobial Resistant Bacteria Confirmation ......................................................................................... 14

*Aspergillus spp.* Culture Isolation/ Identification (see Fungal Culture) .................................................. 14

Actinomyces spp. Serology ......................................................................................................................... 14

Amebiasis Serology (see *Entameba histolytica* serology) ....................................................................... 15

Arbovirus Serology, Additional Tests (WEE and California Group) by cELISA, ELISA ................................ 15

Autoclave Monitoring .................................................................................................................................. 15

**B** ......................................................................................................................................................... 15

*Babesia* Detection ..................................................................................................................................... 15

Babesia Serology by IFA ............................................................................................................................... 15

*Bacillus anthracis* Culture Isolation/ Identification/Rapid Test Methods ............................................... 16

Bacterial Culture Identification, Aerobic ..................................................................................................... 16

Bacterial Culture Identification, Anaerobic .................................................................................................. 16

Bartonella spp. (formerly Rochalimaea spp.) Serology by IFA .................................................................. 17

*Blastomyces spp.* Culture Isolation/ Identification (see Fungal Culture) ............................................... 17

*Blastomyces, Histoplasma, Coccidoides Identification by Nucleic Acid Probe* ..................................... 17

*Blastomyces spp.* Serology (see Fungal Serology) .................................................................................. 17

Blood Borne Pathogen Exposure/Source Patient (HBsAg, HIV, HCV) by EIA ........................................ 17

Blood Borne Pathogen Exposure - Exposed Worker (HBsAb, HIV, HCV) by EIA ...................................... 17

Blood Lead by Anodic Stripping Voltmetry ................................................................................................. 18

*Bordetella pertussis/B. parapertussis/B. holmesii* Direct Detection by Real Time PCR ........................... 18

*Borrelia burgdorferi* Serology Total Antibody by EIA with reflex Western Blot confirmation ................ 18

*Borrelia hermsii* Serology (Tick Borne Relapsing Fever) by IgM/IgG ELISA .......................................... 18

*Borrelia burgdorferi* Culture ..................................................................................................................... 19

*Brucella spp.* Culture Isolation/ Identification/Rapid Test Methods ...................................................... 19

Brucella Serology by Bacterial Agglutination ......................................................................................... 19

*Burkholderia mallei, B. pseudomallei* Culture Isolation / ID / Rapid Test Methods ............................... 20

**C** ......................................................................................................................................................... 20

*Campylobacter spp.* Culture Isolation/Identification .............................................................................. 20

*Candida albicans* Culture Isolation/Identification (see Fungal Culture) ................................................ 20

Carbapenem-Resistant *Enterobacteriaceae* (CRE) Direct Detection by Real-Time PCR ....................... 20

Cat Scratch Fever (see *Bartonella spp.* Serology) .................................................................................. 21

Central Nervous System (CNS) Virus Culture Isolation/Identification .................................................. 21

Chagas Disease (see *Trypanosomiasis* Detection) .................................................................................. 21

Chancroid (see *Haemophilus ducreyi* Culture Isolation) ......................................................................... 21

Chikungunya Virus by PCR (see Zika Trioplex PCR) .............................................................................. 21

*Chlamydia spp.* Culture Isolation/Identification .................................................................................... 21

*Chlamydia trachomatis* Direct Detection by Nucleic Acid Amplification ............................................... 21
Chlamydia trachomatis/Neisseria gonorrhoeae Direct Detection by NAAT (Combo Test) ........................................... 22
Cholera (see Vibrio Culture Isolation/ Identification) .................................................................................................. 22
Clostridium botulinum (Botulism) Bacterial ID, Toxin, and Serology Testing ......................................................... 22
Clostridium difficile PCR, including NAP1 ........................................................................................................... 22
Clostridium spp. (except C. botulinum) Culture Isolation/ ID (see Bacterial Culture, Anaerobic) ......................... 22
CNS Virus Culture (see Central Nervous System Virus Culture) ............................................................................ 22
Coccidioides spp. Culture Isolation/ Identification (see Fungal Culture) ............................................................... 22
Coccidioidomycosis Serology (see Fungal Serology) .............................................................................................. 23
Colorado Tick Fever Virus (CTFV) Serology, IgG by Indirect Immunofluorescence ............................................... 23
Corynebacterium diphtheriae Culture Isolation/ Identification................................................................................. 23
Corynebacterium spp. (not C. diphtheriae) Culture Isolation/ ID (see Bacterial Culture, Aerobic) ......................... 23
Coxiella burnetii by Real-Time PCR ................................................................................................................... 23
Coxiella burnetii Serology (see Q fever Serology) .................................................................................................. 23
Cryptococcus spp. Culture Isolation/ Identification (see Fungal Culture) .................................................................. 23
Cryptosporidium / Cyclospora / Isospora Detection by Fluorescent Stain ............................................................. 24
Cryptosporidium and Giardia (Immunocard) ........................................................................................................ 24
Culture for Storage ................................................................................................................................................... 24
Cyclospora Detection (see Cryptosporidium / Cyclospora / Isospora Detection) ..................................................... 24
Cysticercosis (Taenia spp.) Detection .................................................................................................................. 24
Cytomegalovirus (CMV) Culture Isolation/Identification ................................................................................... 24
Cysticercosis (Taenia spp.) Serology by Immunoblot ............................................................................................ 25
Dengue Fever Virus by PCR (see Zika Triplex PCR) .............................................................................................. 25
Dengue Fever Serology by ELISA .......................................................................................................................... 25
Dermatophytes Culture Isolation/ Identification (see Fungal Culture) .................................................................. 25
Diphtheria (see Corynebacterium diphtheriae Culture Isolation) ........................................................................... 25
DNA Fingerprinting (see Pulsed Field Gel Electrophoresis for enterics or other organisms) ............................... 25
Ebola Virus ............................................................................................................................................................... 26
Echinococciosis Detection ....................................................................................................................................... 26
Echinococciosis Serology by EIA ............................................................................................................................ 26
EHEC, Enterohemorrhagic E. coli (see Escherichia coli Shiga-Like Toxin Assay or Enteric Panel) ....................... 26
Ehrlichia spp. Serology by Indirect Immunofluorescence ..................................................................................... 26
Entameba histolytica Serology by EIA ..................................................................................................................... 27
Enteral Panel Culture Isolation/ Identification Includes screens for Salmonella, Shigella, Campylobacter, E. coli O157 and EHEC .................................................................................................................................................. 27
Enteric Isolate Surveillance ....................................................................................................................................... 27
Enteric Virus Culture Isolation/Identification ......................................................................................................... 28
Enterovirus Culture (see Enteric Virus Culture) ....................................................................................................... 28
Enterovirus (D68) Detection by Real-Time PCR ....................................................................................................... 28
Enterovirus (Pan-Enterovirus) Detection by Real-Time PCR .................................................................................... 28
ESBL (see Antimicrobial Resistant Bacteria Confirmation) ...................................................................................... 28
Escherichia coli O157 Culture Isolation/Identification ............................................................................................ 28
Escherichia coli Shiga-Like Toxin Assay (Enterohemorrhagic E. coli, EHEC or STEC) by EIA ......................... 29
Exanthem Serology Panel, IgG only by EIA, IFA Includes Rubeola, Rubella, HSV, VZV, CTFV and RMSF (during tick season) .................................................................................................................................................. 29

Tests in Alphabetical Order

***A***

**Acid Fast Bacilli (AFB)** *(see Mycobacterium spp.)*

**Actinomyces spp. Culture Isolation/ Identification** *(see Bacterial Culture, Anaerobic)*

**Adenovirus Culture** *(see Respiratory Virus Culture)*

**Adenovirus Direct Detection by Real Time PCR**

Specimen Requirements: Respiratory specimen in Universal Viral Transport Media. See Molecular (Nucleic Acid Amplification) Testing Collection and Transport instructions.

Turn-around Time: 1 to 3 working days. Results are telephoned to the submitter.

CPT Code: 87798
Price: $100.00

Transport Temperature: 2-8°C

**Amebiasis Detection** *(see Ova and Parasite Exam)*

**Anthrax** *(see Bacillus anthracis)*

**Antimicrobial Resistant Bacteria Confirmation**

Specimen Requirements: Isolate submitted in Cary-Blair transport or on solid media.

Submit any isolate that demonstrates a resistance pattern that has high epidemiologic significance, such as potential Vancomycin Resistant or Intermediate *Staphylococcus aureus*, Methicillin Resistant *Staphylococcus aureus*, Vancomycin Resistant Enterococci, ESBL producing *Enterobacteriaceae*, Carbapenem-Resistant *Enterobacteriaceae* - CRE (e.g., KPC or NDM), and resistant *Streptococcus pneumoniae*.

Turn-around Time: 2 to 4 working days. May be referred to the Centers for Disease Control in Atlanta, Georgia.

CPT Code: None
Price: Fee Waived

Transport Temperature: Ambient

**Aspergillus spp. Culture Isolation/ Identification** *(see Fungal Culture)*

**Actinomyces spp. Serology**

Specimen Requirements: 2 mL serum

Referred to the Centers for Disease Control, Atlanta, Georgia
Turn-around Time: 3 to 6 weeks
CPT Code: 86602
Price: $27.00

Transport Temperature: 2-30°C (Refrigeration preferable)

**Amebiasis Serology** *(see Entameba histolytica serology)*

**Arbovirus Serology, Additional Tests (WEE and California Group) by cELISA, ELISA**

Specimen Requirements: 2 mL serum or CSF
Paired acute and convalescent serum recommended. Date of onset must be included on requisition form.

Referred to the Centers for Disease Control, Fort Collins, CO
Turn-around Time: 4 to 6 weeks

**CPT Codes:**
86654 (Western Equine Encephalitis)  Price: $27.00
86651 (California Group)

Transport Temperature: 2-30°C (Refrigeration preferable)

**Autoclave Monitoring**

Specimen Requirements: BT Sure vials containing Bacillus stearothermophilus are obtained by contacting the laboratory. Place the BT Sure vial in center of load to be sterilized, then autoclave using normal procedures.

Turn-around Time: 2 working days from receipt of specimen

**CPT Code:** No code
Price: $21.50

Transport Temperature: Ambient

***B***

**Babesia Detection**

Specimen Requirements: Blood smear, unstained or stained with Wright’s or Giemsa.

Turn-around Time: 1 to 2 working days. Positive smears are referred to the Centers for Disease Control, Atlanta, Georgia for confirmation.

**CPT Code:** 87207
Price: $31.00

Transport Temperature: Ambient

**Babesia Serology by IFA**

Specimen Requirements: 2 mL serum

Referred to the Centers for Disease Control, Atlanta, Georgia
Turn-around Time: 3 to 6 weeks

CPT Code: 86256
Price: $27.00

Transport Temperature: 2-30°C (Refrigeration preferable)

**Bacillus anthracis Culture Isolation/ Identification/Rapid Test Methods**
Specimen Requirements: Lesion swab, clinical specimen or culture isolate on solid media or in Cary-Blair transport.

*Note: A suspected B. anthracis culture requires Infectious Disease packaging (Class 6.2) and trackable shipping. Please notify the laboratory by telephone at time of shipment.*

*Please contact the laboratory prior to submission regarding environmental samples, rapid test methods, and transport instructions.*

Turn-around Time: Cultures will be held for five (5) working days before reporting as negative. Results are telephoned as soon as possible to the submitter.

Rapid test methods are performed in Molecular Diagnostics and are available within 6 - 8 hours of specimen receipt.

**CPT Codes:**

- 87081 (Culture screen)  
  Price: $35.00
- 87798 (PCR)  
  Price: Fee Waived

Transport Temperature: Ambient

**Bacterial Culture Identification, Aerobic**
Specimen Requirements: Send non-fastidious Gram negative or Gram positive isolates on solid media or on swab in Cary-Blair transport. Fastidious or slow growing organisms require careful transport on an enriched agar medium.  *Please contact the laboratory prior to submission regarding environmental samples, rapid test methods, and transport instructions and to notify the laboratory of time of shipment.*

Turn-around Time: Normally 3 to 14 working days, depending on the growth rate of the isolate.

**CPT Codes:**

- 87070 (culture, presumptive ID)  
  Price: $22.00
- 87077 (Each add'l ID)  
  Price: $20.00

Transport Temperature: Ambient

**Bacterial Culture Identification, Anaerobic**
Specimen Requirements: Send isolate in an anaerobic transport system.

Turn-around Time: Normally 3 to 14 working days, depending on the growth rate of the isolate.

**CPT Codes:**

- 87075 (culture, presumptive ID)  
  Price: $22.00
- 87076 (Each add'l ID)  
  Price: 22.00

Transport Temperature: Ambient
**Bartonella spp. (formerly Rochalimaea spp.) Serology by IFA**
Specimen Requirements: 2 mL serum, plus completed cat scratch fever disease history form. The laboratory will fax you a form upon request.

Referred to the Centers for Disease Control, Atlanta, Georgia
Turn-around Time: 4 to 6 weeks

**CPT Code:** 86256
Price: $27.00

Transport Temperature: 2-8°C

**Blastomyces spp. Culture Isolation/ Identification** *(see Fungal Culture)*

**Blastomyces, Histoplasma, Coccidoides Identification by Nucleic Acid Probe**
Specimen Requirements: Isolates sent on Sabouraud’s slants or as reflex testing on positive primary specimens submitted for culture.

Turn-around Time: 1 to 3 working days for submitted isolates, others dependent on growth rate.

**CPT Code:** 87149 X 3
Price: $31.00 each

Transport Temperature: Ambient

**Blastomyces spp. Serology** *(see Fungal Serology)*

**Blood Borne Pathogen Exposure/Source Patient (HBsAg, HIV, HCV) by EIA**
Specimen Requirements: 2 mL serum

Turn-around Time: Routinely batch tested once per week. Positive results are telephoned to the submitter. These tests may be ordered as a panel, but are billed individually.

**CPT Codes:**
87340 (HBsAg)  
87389 (HIV)  
86803 (HCV)  
Total Price: $90.00

Price: $23.00  
Price: $29.00  
Price: $38.00

Transport Temperature: 2-8°C

**Blood Borne Pathogen Exposure - Exposed Worker (HBsAb, HIV, HCV) by EIA**
Specimen Requirements: 2 mL serum

Turn-around Time: Routinely batch tested once per week. Positive results are telephoned to the submitter. These tests may be ordered as a panel, but are billed individually.

**CPT Codes:**
86706 (HBsAb)  
87389 (HIV)  
86803 (HCV)  
Total Price: $95.00

Price: $28.00  
Price: $29.00  
Price: $38.00
**Blood Lead by Anodic Stripping Voltometry**

Specimen Requirements: 1 mL venous or 0.3 mL capillary whole blood, EDTA (purple top). Adult and child specimen collection kits are available through the laboratory. The laboratory is certified to test for both child and adult lead levels. See Blood Lead Collection and Transport instructions on the collection and transport of capillary and venous specimens.

Turn-around Time: Routinely batch tested at least twice per week. Elevated results are telephoned to the submitter.

**CPT Code:** 83655  
**Price:** $21.00

Transport Temperature: 2-30°C (Refrigeration preferable)

**Bordetella pertussis/B. parapertussis/B. holmesii Direct Detection by Real Time PCR**

Specimen Requirements: Nasopharyngeal (NP) swab in a sterile container without transport media. Do not submit a throat or nares specimen or a specimen submitted in Regan Lowe Media. See Molecular (Nucleic Acid Amplification) Testing Collection and Transport instructions.

Turn-around Time: 1 to 2 working days. Positive results are telephoned to the submitter.

**NOTE:** PCR testing should be performed only on symptomatic patients; a positive PCR in an asymptomatic patient does not meet the standard CDC case definition and cannot be considered a case of pertussis. PCR testing may be able to detect B. pertussis 3 to 4 weeks post onset, and after antibiotic therapy has been initiated.

**CPT Code:** 87801  
**Price:** $100.00

**Borrelia burgdorferi Serology Total Antibody by EIA with reflex Western Blot confirmation**

Specimen Requirements: 2 mL serum  
Date of onset information must be included on requisition form.

Turn-around Time: Routinely batch-tested once per week. Specimens that test positive or equivocal are referred to South Dakota Public Health Laboratory in Pierre, SD, for Lyme IgG and IgM Western Blot confirmation.

**CPT Code:** 86618 (Screen)  
**Price:** $35.00  
**CPT Code:** 86617 (Western Blot)  
**Price:** $100.00

Transport Temperature: 2-30°C (Refrigeration preferable)

**Borrelia hermsii Serology (Tick Borne Relapsing Fever) by IgM/IgG ELISA**

Specimen Requirements: 2 mL serum  
Paired acute and convalescent serum recommended. Date of onset information must be included on requisition form.

**Referred to the Centers for Disease Control, Fort Collins, Colorado**

Turn-around Time: 4 to 6 weeks

**CPT Code:** 86619
Price: $27.00
Transport Temperature: 2-30°C (Refrigeration preferable)

*Borrelia burgdorferi Culture*
Specimen Requirements: Skin punch biopsy, synovial fluid, CSF. *Contact the laboratory prior to collection for special instructions and transport media.*

Referred to the Centers for Disease Control, Fort Collins, Colorado
Turn-around Time: 4 to 6 weeks

**CPT Code:** 87081
Price: $27.00
Transport Temperature: Ambient

*Brucella spp. Culture Isolation/ Identification/Rapid Test Methods*
Specimen Requirements: EDTA whole blood (PCR) or suspect culture isolates on solid medium.

*Note:* A suspected Brucella spp. culture requires Infectious Disease packaging (Class 6.2) and trackable shipping. Please notify the laboratory by telephone at time of shipment.

*Please contact the laboratory prior to submission regarding environmental samples, rapid test methods, and transport instructions.*

Turn-around Time: Cultures will be held for five (5) working days before reporting as negative. Results are telephoned as soon as possible to the submitter.

Rapid test methods are performed in Molecular Diagnostics and are available within 6 - 8 hours of specimen receipt.

**CPT Codes:**
- 87081 (Culture screen)  
  Price: $35.00
- 87798 (PCR)  
  Price: Fee Waived

Transport Temperature: Ambient

*Brucella Serology by Bacterial Agglutination*
Specimen Requirements: 2 ml. Serum
Paired acute and convalescent serum recommended.

Turn-around Time: Routinely batch tested once per week. Positive results are telephoned to the submitter.

**NOTE:** Tularemia serology will be automatically performed on all requests for Brucella serology due to antigen cross reactivity.

**CPT Codes:**
- 86622 (Brucella)  
  Price: $22.00
- 86668 (Tularemia)  
  Price: $22.00

Total Price: $44.00
Transport Temperature: 2-30°C (Refrigeration preferable)
**Burkholderia mallei, B. pseudomallei Culture Isolation / ID / Rapid Test Methods**

Specimen Requirements: Clinical specimen in sterile container or isolate submitted in Cary-Blair transport or on solid medium.

*Note: A suspected Burkholderia mallei or B. pseudomallei culture requires Infectious Disease packaging (Class 6.2) and trackable shipping. Please notify the laboratory by telephone at time of shipment.*

*Please contact the laboratory prior to submission regarding environmental samples, rapid test methods, and transport instructions.*

Turn-around Time: Cultures will be held for five (5) working days before reporting as negative. Results are telephoned as soon as possible to the submitter.

Rapid test methods are performed in Molecular Diagnostics and are available within 6 - 8 hours of specimen receipt.

Transport Temperature: 2-8°C for stool specimens, ambient for isolates

**Candida albicans Culture Isolation/Identification** *(see Fungal Culture)*

**Carbapenem-Resistant Enterobacteriaceae (CRE) Direct Detection by Real-Time PCR**

Detects and differentiates KPC, NDM, VIM, OXA-48, and IMP gene sequences associated with Carbapenem non-susceptibility in gram-negative bacteria.

Specimen requirements: Clinical isolate or direct rectal swab collection. Rectal swabs specific to this test are provided by MTPHL. Store the collection swabs at room temperature. For collection of a paired rectal swab, See Molecular (Nucleic Acid Amplification) Testing Collection and Transport instructions.

Turn-around Time: Routinely tested each working day. Positive results are telephoned to the submitter.

**CPT Code:** None

Price: Fee Waived

Transport Temperature: Ambient
Cat Scratch Fever (see Bartonella spp. Serology)

Central Nervous System (CNS) Virus Culture Isolation/Identification

Specimen Requirements: CSF or Central Nervous System specimen in Universal Viral Transport Media, received within 48 hours of collection. See Viral Isolation/Culture Collection and Transport instructions.

Turn-around Time: Cultures are monitored for 2 weeks prior to a negative report. Positive results are telephoned to the submitter.

NOTE: CNS specimens for virus isolation are screened for the presence of the following commonly isolated viruses: Herpes Simplex Virus, Enterovirus (including Echovirus and Coxsackie A & B) and Adenovirus

CPT Codes:
87252 (culture) 87253 (Virus ID) Each add’l ID
Price: $41.00 Price: $31.00

Transport Temperature: 2-8°C

Chagas Disease (see Trypanosomiasis Detection)

Chancroid (see Haemophilus ducreyi Culture Isolation)

Chikungunya Virus by PCR (see Zika Trioplex PCR)

Chlamydia spp. Culture Isolation/Identification

Specimen Requirements: Specimen in Universal Viral Transport Media received within 48 hours of collection. See Chlamydia spp. Isolation/Culture Collection and Transport instructions.

Turn-around Time: 3 to 6 working days. Positive test results are telephoned to the submitter.

CPT Code: 87110
Price: $41.00

Transport Temperature: 2-8°C

Chlamydia trachomatis Direct Detection by Nucleic Acid Amplification

Specimen Requirements: Endocervical, male urethral, throat or rectal swab in APTIMA Uni-Sex Swab Specimen Collection Tube, vaginal swab in APTIMA Vaginal Specimen Collection Tube, or urine in APTIMA Urine Specimen Collection Tube. See Chlamydia/Gonorrhea Amplified Testing Collection and Transport instructions.

Turn-around Time: Routinely tested three (3) days/week (Monday, Wednesday, Friday). Positive results are telephoned to the submitter.

NOTE: Can be run in tandem with Neisseria gonorrhoeae Direct Detection by APTIMA Amplification (see Combination Amplification Test below)

CPT Code: 87491
Price: $44.00

Transport Temperature: 2-30°C
Chlamydia trachomatis/Neisseria gonorrhoeae Direct Detection by NAAT (Combo Test)
Specimen Requirements: Endocervical, male urethral, throat or rectal swab in APTIMA Uni-Sex Swab Specimen Collection Tube, vaginal swab in APTIMA Vaginal Specimen Collection Tube, or urine in APTIMA Urine Specimen Collection Tube. See Chlamydia/Gonorrhea Amplified Testing Collection and Transport instructions.

Turn-around Time: Routinely tested three (3) days/week (Monday, Wednesday, Friday). Positive results are telephoned to the submitter. These tests can be ordered as a panel, but will be billed individually.

CPT Codes:
87491 (Chlamydia) 87591 (GC) Total Price: $88.00
Price: $44.00 Price: $44.00

Transport Temperature: 2-30°C

Cholera (see Vibrio Culture Isolation/ Identification)

Clostridium botulinum (Botulism) Bacterial ID, Toxin, and Serology Testing
Call the Montana Public Health Laboratory at (800)821-7284 for consultation on sending specimens; an epidemiologic consultation is also required for preapproval of testing, and for making arrangements to receive antitoxin.

Specimen Requirements: 10 mL serum, and 25 gm stool. Special requirements for infants is a stool sample only, serum will not be accepted.

Food testing is not performed at MTPHL.

Human testing referred to the Utah State Public Health Laboratory in Salt Lake City, UT

Turn-around Time: Preliminary results in 2 to 4 working days.

CPT Code: None
Price: Fee Waived*

Transport Temperature: Contact the laboratory

Clostridium difficile PCR, including NAP1
Specimen Requirements: Liquid or unformed stool in a sterile container

Turn-around Time: 1 to 2 working days. Positive results are telephoned to the submitter.

CPT Code: 87493
Price: $100.00

Transport Temperature: 2-8°C (Stable for up to 5 days when stored at 2-8°C)

Clostridium spp. (except C. botulinum) Culture Isolation/ ID (see Bacterial Culture, Anaerobic)

CNS Virus Culture (see Central Nervous System Virus Culture)

Coccidioides spp. Culture Isolation/ Identification (see Fungal Culture)
**Coccidioidomycosis Serology** *(see Fungal Serology)*

**Colorado Tick Fever Virus (CTFV) Serology, IgG by Indirect Immunofluorescence**
Specimen Requirements: 1 mL serum
Paired acute and convalescent serum recommended.

Turn-around Time: Routinely batch tested once per week. Positive results are telephoned to the submitter.

NOTE: Rocky Mountain Spotted Fever testing will automatically be performed on all requests for Colorado Tick Fever.

**CPT Codes:**

Total Price: $44.00

Transport Temperature: 2-30°C (Refrigeration preferable)

**Corynebacterium diphtheriae Culture Isolation/ Identification**
Specimen Requirements: Throat, nasal, and wound swabs, pseudo-membrane, and sputum. Swabs may be placed in Amies or Stuart transport medial. Pseudo-membrane should be sent in leak proof container with saline (not formalin).

Referred to the Centers for Disease Control, Atlanta, Georgia
Turn-around Time: One week. Positive results are telephoned to the submitter.

**CPT Code:** 87081
Price: $27.00

Transport Temperature: Ambient

**Corynebacterium spp. (not C. diphtheriae) Culture Isolation/ ID** *(see Bacterial Culture, Aerobic)*

**Coxiella burnetii by Real-Time PCR**
Specimen Requirements: Whole blood or environmental samples

*Please contact the Montana Public Health Laboratory prior to submission regarding sample collection and transport instructions.*

Turn-around Time: Rapid test methods are performed in Molecular Diagnostics and are available within 6 - 8 hours of specimen receipt. Results are telephoned as soon as possible to the submitter.

NOTE: This is a presumptive assay. Confirmation for *Coxiella burnetii* is performed at the Centers for Disease Control and Prevention (CDC).

**CPT Code:** 87798
Price: Fee Waived

Transport Temperature: Ambient

**Coxiella burnetii Serology** *(see Q fever Serology)*

**Cryptococcus spp. Culture Isolation/ Identification** *(see Fungal Culture)*
**Cryptosporidium / Cyclospora / Isospora Detection by Fluorescent Stain**

Specimen Requirements: Stool in formalin

Turn-around Time: Performed each working day. Positive results are telephoned to the submitter.

**CPT Code:** 87207  
Price: $31.00

Transport Temperature: Ambient

**Cryptosporidium and Giardia (Immunocard)**

Specimen Requirements: 10% Formalin and sodium acetate-acetic acid-formalin (SAF) or Total Fix preserved stool.  
**NOTE:** Specimens in PVA are not suitable

Turn-around Time: 1 to 2 working days. Positive results are telephoned to the submitter.

**CPT Codes:**  
87328 (Cryptosporidium)  
87329 (Giardia)  
Price: $31.00

Transport Temperature: Ambient

**Culture for Storage**

Specimen Requirements: Isolate submitted in Cary-Blair transport or on solid media.

Submit organisms that are of epidemiologic interest and need to be stored for molecular comparison to other strains. Laboratories are encouraged to submit organisms which may be part of an outbreak or which demonstrate a significant antibiotic resistance, i.e. *Salmonella spp.*, *E. coli* O157, *Toxigenic E. coli*, *Shigella spp.*, *N. gonorrhoeae*, *N. meningitidis* from a sterile site, *H. influenzae* from a sterile site, resistant *Streptococcus pneumoniae*, MRSA, CRE, VRE, ESBL, KPC, potential VISA or VRSA.

**CPT Code:** None  
Price: Fee Waived

Transport Temperature: Ambient

**Cyclospora Detection** (see Cryptosporidium / Cyclospora / Isospora Detection)

**Cysticercosis (Taenia spp.) Detection**

Specimen Requirements: Stained tissue section

Referred to the Centers for Disease Control, Atlanta, Georgia

Turn-around Time: 2 to 4 weeks

**CPT Code:** 87207  
Price: $27.00

Transport Temperature: Ambient

**Cytomegalovirus (CMV) Culture Isolation/Identification**

Includes both traditional tube culture and spun vial technology
Specimen Requirements: Urine, BAL, or Bronchial Washings in Universal Viral Transport Media, Heparinized Blood, Biopsies, received within 48 hours of collection. See Viral Isolation/Culture Collection and Transport instructions.

Turn-around Time: Spun vial results available within 2 to 3 working days. Cultures are monitored for 1 month before reporting as negative. Cultures of tissue samples are monitored for 2 months prior to a negative report. Positive results are telephoned to the submitter.

Transport Temperature: 2-8°C

**Cysticercosis (Taenia spp.) Serology by Immunoblot**

Specimen Requirements: 2 mL serum

Referred to the Centers for Disease Control, Atlanta, Georgia

Turn-around Time: 3 to 6 weeks

CPT Code: 84182
Price: $27.00

Transport Temperature: 2-30°C (Refrigeration preferable)

***D***

**Dengue Fever Virus by PCR** *(see Zika Triplex PCR)*

**Dengue Fever Serology by ELISA**

Specimen Requirements: 2 mL serum

Referred to the Centers for Disease Control, San Juan, Puerto Rico

Turn-around Time: 4 to 6 weeks

CPT Code: 86790
Price: $27.00

Transport Temperature: 2-30°C (Refrigeration preferable)

**Dermatophytes Culture Isolation/ Identification** *(see Fungal Culture)*

**Diphtheria** *(see Corynebacterium diphtheriae Culture Isolation)*

**DNA Fingerprinting** *(see Pulsed Field Gel Electrophoresis for enterics or other organisms)*

***E***
**Ebola Virus**
Specimen Requirements: Whole blood, serum, or plasma. Urine may be submitted, but only when accompanied by a blood specimen.

*NOTE: Contact your local health department or the State Epidemiology Department (406-444-0273) to ensure the patient meets criteria for testing.*

*A specimen suspected of containing Ebola Virus requires Infectious Disease packaging (Class 6.2) and trackable shipping. Please contact the Montana Public Health Laboratory prior to submission regarding sample collection and transport instructions.*

Turn-around Time: Rapid test methods are performed in Molecular Diagnostics and are available within 6 - 8 hours of specimen receipt. Samples that yield positive, equivocal, or inconclusive results will be forwarded to CDC for additional evaluation.

**CPT Code:** 87798  
Price: Fee Waived

Transport Temperature: Whole blood: 2-8°C  
Serum, plasma, or urine: 2-8°C or frozen

**Echinococcosis Detection**
Specimen Requirements: Stained tissue section

Referred to the Centers for Disease Control, Atlanta, Georgia  
Turn-around Time: 1 to 3 weeks

**CPT Code:** 87207  
Price: $27.00

Transport Temperature: 2-8°C

**Echinococcosis Serology by EIA**
Specimen Requirements: 2 mL serum

Referred to the Centers for Disease Control, Atlanta, Georgia  
Turn-around Time: 2 to 4 weeks

**CPT Code:** 84182  
Price: $27.00

Transport Temperature: 2-30°C (Refrigeration preferable)

**EHEC, Enterohemorrhagic E. coli (see Escherichia coli Shiga-Like Toxin Assay or Enteric Panel)**

**Ehrlichia spp. Serology by Indirect Immunofluorescence**
Specimen Requirements: 2 mL serum

Referred to the Centers for Disease Control, Atlanta, Georgia  
Turn-around Time: 4 to 6 weeks

**CPT Code:** 86682
Entameba histolytica Serology by EIA

Specimen Requirements: 2 mL serum  Include documentation of negative stool examinations for E. histolytica.

Referred to the Centers for Disease Control, Atlanta, Georgia

Turn-around Time: 3 to 6 weeks

CPT Code: 86753

Price: $27.00

Transport Temperature: 2-30°C (Refrigeration preferable)

Enteric Panel Culture Isolation/ Identification

Includes screens for Salmonella, Shigella, Campylobacter, E. coli O157 and EHEC

Specimen Requirements: Stool in Cary-Blair transport, or other commercial enteric transport media. Collect stool directly from patient into a clean specimen container. Do not collect from toilet bowl or use stool contaminated with urine. Use a sterile swab to collect a portion of the stool (collect from bloody or mucous-containing areas if present) and insert swab to the lower part of a Cary-Blair transport tube and break or cut the swab stick. A rectal swab is also acceptable if there is evidence of fecal staining on the swab. Cary-Blair transport tubes are supplied upon request.

Escherichia coli Shiga-Like Toxin Assay will be performed on all specimens. Stools with positive toxin tests will be further cultured to isolate and identify the toxin-producing organism.

Turn-around Time: 2 to 4 working days. Positive test results are telephoned to the submitter.

Enteric Isolate Surveillance

Specimen Requirements: All isolates of shiga-toxin producing Escherichia coli (including serotype O157:H7), Salmonella spp., Shigella spp., Vibrio, and Listeria should be referred for surveillance purposes.

Confirmation of isolates is performed and results are reported to submitter. In addition, PFGE testing (DNA fingerprinting) will be performed to determine strain-relatedness; results are compared to other strain patterns in Montana and across the nation using the CDC PulseNet database. Results are communicated to the DPHHS Epidemiology staff for follow up.

Turn-around Time: Routinely tested each week.

CPT Code: none

Price: Fee Waived
Transport Temperature: Ambient

**Enteric Virus Culture Isolation/Identification**
Specimen Requirements: Stool or Rectal Swab in Universal Viral Transport Media, received within 48 hours of collection. See Viral Isolation/Culture Collection and Transport instructions.

Turn-around Time: Cultures are monitored for 2 weeks prior to a negative report. Positive results are telephoned to the submitter.

NOTE: Enteric specimens for virus isolation are screened for the following commonly isolated viruses: Enterovirus (including Echovirus and Coxsackie A & B), Adenovirus, and Herpes Simplex Virus

CPT Codes:
87252 (culture) 87253 (Virus ID) Each add’l ID
Price: $41.00 Price: $31.00

Enterovirus Culture ([see Enteric Virus Culture](#))

**Enterovirus (D68) Detection by Real-Time PCR**
Specimen Requirements: CSF in a sterile transport container without transport media, respiratory specimens (solid or swabs) in Universal Viral Transport Media. See Molecular (Nucleic Acid Amplification) Testing Collection and Transport instructions.

Turn-around Time: 1 to 3 working days. Positive results are telephoned to the submitter.

CPT Code: 87498
Price: $100.00

Transport Temperature: 2-8°C

**Enterovirus (Pan-Enterovirus) Detection by Real-Time PCR**
Specimen Requirements: CSF in a sterile transport container without transport media, respiratory specimens (solid or swabs) in Universal Viral Transport Media. See Molecular (Nucleic Acid Amplification) Testing Collection and Transport instructions.

Turn-around Time: 1 to 3 working days. Positive results are telephoned to the submitter.

CPT Code: 87498
Price: $100.00

Transport Temperature: 2-8°C

**ESBL ([see Antimicrobial Resistant Bacteria Confirmation](#))**

**Escherichia coli O157 Culture Isolation/Identification**
Specimen Requirements: Stool specimen in Cary-Blair transport, or other commercial enteric transport media, or culture isolate submitted in Cary Blair transport or on solid media.

*Note: A suspected E. coli O157 culture requires Infectious Disease packaging (Class 6.2) and trackable shipping. Please notify the laboratory by telephone at time of shipment.*
For public health surveillance, please submit all isolates of *E. coli* O157 to the laboratory. See Enteric Isolate Surveillance.

Turn-around Time: 2 to 4 working days. Positive results are telephoned to the submitter.

**Haemophilus spp. Culture Isolation/ Identification** *(see Bacterial Culture, Aerobic)*

**Hantavirus (Sin Nombre Virus) IgG + IgM Serology by EIA, capture EIA**
Specimen Requirements: 1 mL serum

Turn-around Time: Routinely batch tested once per week. STAT testing is available each working day, or on weekends and holidays as needed. *Call ahead to notify the laboratory and to make arrangements.* Positive and STAT results are telephoned to the submitter.

To qualify for STAT testing, all of the following criteria must be met:
1. The patient is hospitalized with an acute respiratory illness, typical of Hantavirus Pulmonary Syndrome (HPS).
2. The patient is critically ill.
3. The patient does not have any relevant underlying medical condition that could account for the symptoms (COPD, malignancy, immunosuppression, diabetes)
4. The onset of illness (date when prodromal symptoms such as low-grade fever and myalgia were noted) is three (3) or more days prior to serum sample collection. IgM antibody to SNV is usually not detectable until the patient develops shortness of breath.

**Herpes Zoster Virus Culture (See Varicella Zoster Virus Culture)**

**Herpes Zoster Virus IgG Serology by EIA (See Varicella Zoster Virus Serology)**

**Histoplasma Culture Isolation/ Identification (see Fungal Culture)**

**Histoplasma Serology (see Fungal Serology)**

**HIV 1/2 Ab/p24 Ag by EIA**

Specimen Requirements: 1 mL serum

Turn-around Time: EIA screens routinely tested at least two (2) days each week. Positive results are telephoned to the submitter.

NOTE: Reflex supplemental testing is performed on all repeat reactive EIA screens using the newly proposed HIV testing algorithm. HIV-1/HIV-2 Geenius testing will be performed at North Dakota Public Health Laboratory to confirm the presence of HIV antibody and to differentiate HIV-1 and HIV-2. HIV NAT testing will be performed to confirm the presence of HIV p24 antigen (acute infection) when the HIV Ab/Ag Combo test is repeat reactive and the HIV-1/HIV-2 Geenius test is negative.
CPT Codes:
87389  10002BR (HIV-1/HIV-2 Geenius)
Price: $29.00  Price: $50.00

Transport Temperature: 2-8°C or frozen

**HIV-1/HIV-2 Geenius**
Specimen Requirements: 1 mL serum

NOTE: This test is used to differentiate HIV-1 and HIV-2 and is used in an algorithm when the HIV Combo Ag/Ab EIA is repeat-reactive. Repeat reactive EIA screens with inconclusive Geenius results are reflexed to the Florida Department of Public Health in Jacksonville, FL, for HIV NAT testing.

Referred to North Dakota Public Health Laboratory
Turn-around Time: One week

CPT Code: 10002BR
Price: $50.00

Transport Temperature: 2-8°C or frozen

***

**Influenza A and B Culture (See Respiratory Virus Culture)**

**Influenza A and B Direct Detection by Real Time PCR**
Specimen Requirements: Respiratory specimen in Universal Viral Transport Media. See Molecular (Nucleic Acid Amplification) Testing Collection and Transport instructions.

This test detects Influenza B and all subtypes of Influenza A. All specimens positive for Influenza A will be reflexed to real-time PCR subtyping. Specimens positive for Influenza B will be reflexed to real-time PCR genotyping.

Turn-around Time: 1 to 3 working days. Positive results are telephoned to the submitter.

CPT Code: 87502
Price: $50.00

Transport Temperature: 2-8°C

**Influenza A Sub-typing by Immunofluorescence**
Specimen Requirements: Influenza A virus isolate from cell culture. All Influenza A isolates are reflexed to typing for H1N1 2009 pdm and H3 subtypes

Turn-around Time: Performed as needed. Results are telephoned to the submitter.

CPT Code: 87276
Price: $12.00

Transport Temperature: 2-8°C
**Influenza A Sub-typing by Real Time PCR**
Detects Influenza A subtypes H3N2, H1N1 2009 pdm, H5, H7, or variant subtypes

Specimen Requirements: Nucleic acid derived from a PCR specimen screened positive for Influenza A. Reflex testing is performed on all Influenza A positive specimens.

Turn-around Time: Sub-typing is performed each working day. Results are telephoned to the submitter.

**CPT Code:** 87503  
**Price:** $30.00  
**Transport Temperature:** 2-8°C

**Influenza B Genotyping by Real Time PCR**
Detects Yamagata and Victoria lineage genotypes

Specimen Requirements: Nucleic acid derived from a PCR specimen screened positive for Influenza B. Reflex testing is performed on all Influenza B positive specimens.

Turn-around Time: Sub-typing is performed each working day. Results are telephoned to the submitter.

**CPT Code:** 87503  
**Price:** $30.00  
**Transport Temperature:** 2-8°C

**Influenza Isolate Susceptibility Testing and Characterization**
Specimen Requirements: Influenza A isolate in cell culture fluid. The laboratory routinely selects significant isolates for susceptibility testing and characterization.

*Testing is performed at no cost for epidemiological purposes.

Referred to the Centers for Disease Control, Atlanta, Georgia  
**Turn-around Time:** 6 to 8 weeks

*Measles Serology (see Rubeola Serology)*

*Meningococcal Infection (see Neisseria spp. including N. meningitidis Culture)*
**MERS Co-V**
Detects Middle Eastern Respiratory Syndrome Virus from individuals meeting MERS-CoV clinical and/or Epidemiological criteria. History of travel to a geographic location where MERS-CoV cases have been detected, contact with a probable or confirmed MERS-CoV case, or other epidemiologic links for which MERS-CoV testing may be indicated as part of a public health investigation.

Specimen Requirements: Respiratory specimens; Nasopharyngeal or oropharyngeal swabs, lower respiratory aspirates/washes.

Turn-around Time: 1 to 3 working days. Results are telephoned to the submitter.

**CPT Code:** 87798  
**Price:** Fee Waived

Transport Temperature: 2-8°C

**Methicillin Resistant Staphylococcus aureus (MRSA) (see Antimicrobial Resistant Bacteria Confirmation)**

**Modified Acid Fast Stain**
Specimen Requirements: Send specimens in sterile container. Add sterile saline or broth to tissues or other non-liquid specimens. Send isolates on LJ medium.

Turn-around Time: 1 to 2 working days. Positive results will be called to the submitter.

**CPT Code:** 87206 (smear)  
**Price:** $15.00

Transport Temperature: Ambient

**Mold Culture Isolation/ Identification (see Fungal Culture)**

**MRSA (see Antimicrobial Resistant Bacteria Confirmation)**

**Mumps Culture Isolation/ Identification**
Specimen Requirements: Saliva, Urine in Universal Viral Transport Media, received within 48 hours of collection. See Viral Isolation/Culture Collection and Transport instructions.

*Contact the laboratory if molecular testing is requested.*

Turn-around Time: Cultures are monitored for 2 weeks prior to a negative report. Positive results are telephoned to the submitter.

**CPT Codes:**  
87252 (culture)  
Price: $41.00  
87253 (Virus ID) Each add’l ID  
Price: $31.00

Transport Temperature: 2-8°C

**Mumps Direct Detection by Real Time PCR**
Specimen Requirements: Oral/buccal or oropharyngeal Dacron swabs in viral transport media or 50 ml minimum of urine. Urine should be centrifuged at 2500xg for 15 min at 4° C. Resuspend sediment in 2 ml viral transport media. Specimen Requirements: 10 mL serum and 25 gm stool.
Note: Urine may not be positive until 4 days after symptom onset.  
*CSF may be submitted in meningitis/encephalitis-suspect cases with prior consult.*

Turn-around Time: 1 to 2 working days. Positive results are telephoned to the submitter.

**CPT Code:** 87798  
Price: $100.00

Transport Temperature: 2-8° C within 24 hours or freeze at -70° C and transport on dry ice.

**Mumps IgG Serology by EIA**  
Specimen Requirements: 1 mL serum  
Screen or paired acute and convalescent specimens

Turn-around Time: Routinely batch tested once per week. Positive results are telephoned to the submitter.

**CPT Code:** 86735  
Price: $22.00

Transport temperature: 2-30°C (Refrigeration preferable)

**Mumps IgM Serology by IFA**  
Specimen Requirements: 1 mL serum  
Collect specimen two (2) days after onset of illness and include date of onset.

Turn-around Time: Testing performed at North Dakota Public Health Laboratory as needed. Results are available within 2-3 days. Results are telephoned to the submitter.

**CPT Code:** 86735  
Price: $22.00

Transport Temperature: 2-30°C (Refrigeration preferable)

**Mycobacterium spp. Culture Isolation/ Identification**  
Specimen Requirements: Send specimens in sterile container. Add sterile saline or broth to tissues or other non-liquid specimens. Send isolates on LJ medium or in liquid media vials. See *Mycobacterium spp. (AFB or TB) Testing Collection and Transport instructions.*

Turn-around Time: Smear reports are faxed to submitter by 5 p.m. the same day specimen is processed. Positive results are telephoned to the submitter; cultures are monitored for 6 weeks prior to negative report. Cultures positive for Mycobacterium tuberculosis complex will be reflexed for *Mycobacterium tuberculosis complex Antimicrobial Susceptibility Testing.*

NOTE: After a patient has tested positive for *M. tuberculosis*, no more than three specimens per week from the same body site will be processed to determine response to therapy and infectious status, without prior consultation. To determine response to therapy, specimens should be obtained no sooner than 7 days post initiation of therapy.

**Transport Temperature:** Heparinized blood-ambient; all other specimens-2-8°C

**Mycobacterium spp. Identification by Nucleic Acid Probe**

Specimen Requirements: Isolates sent on LJ slants or in liquid media vials, or as reflex testing on positive primary specimens submitted for culture.

Turn-around Time: 1 to 3 working days for submitted isolates, others dependent on growth rate.

NOTE: On initial isolation of an AFB from a new patient, both *M. tuberculosis* complex and *M. avium* complex probes will be run on the isolate. After *M. tuberculosis* complex has been confirmed in the patient, subsequent cultures received during the next six weeks will only be probed for *M. tuberculosis* complex.

**CPT Codes:**

- 87555 (M. tuberculosis)
- 87560 (M. avium probe)
- 87550 (M. gordonae or M. kansasii)  
  Price: $31.00 each

**Mycobacterium tuberculosis complex Antimicrobial Susceptibility Testing**

Specimen Requirements: Isolates sent on LJ slants or in liquid media vials, or primary specimens submitted for culture. Reflex testing is performed on *Mycobacterium tuberculosis* complex isolates identified in this laboratory.

Agents tested include Isoniazid (two concentrations), Rifampin, Ethambutol and PZA.

Turn-around Time: 7 to 14 working days from date susceptibility testing is begun.

NOTE: Susceptibility testing for *M. tuberculosis* will be performed only on the first isolate from the patient, and will be repeated on subsequent isolates from specimens received 2 months after initiation of therapy. Other susceptibility testing, including molecular drug susceptibility testing or second line drug testing is available upon consultation.

**CPT Code:** 87190 X 5  
**Total Price:** $77.50  
**Price:** $15.50 each

**Mycobacterium tuberculosis Nucleic Acid Amplification Testing with Rifampin resistance marker**

Specimen Requirements: Processed concentrated respiratory specimen or primary respiratory specimen. See Mycobacterium spp. (AFB or TB) Testing Collection and Transport instructions.

Turn-around Time: 1 to 2 working days. Call ahead to make testing arrangements. Results are telephoned to the submitter.

NOTE: Nucleic acid amplification testing (NAAT) is recommended on specimens of patients highly suspected or known to have TB.

If NAAT is not ordered and an AFB smear is positive, the laboratory will contact the submitter to offer NAAT testing for *M. tuberculosis* complex.

**CPT Code:** 87556  
**Price:** $95.00

**Transport Temperature:** 2-8°C
Mycology Culture (see Fungal Culture)

***N***

**Neisseria gonorrhoeae Culture Isolation/ Identification**
Specimen Requirements: Primary culture or isolate on MTM or chocolate media; identification performed by Nucleic Acid Probe.

Turn-around Time: 2 to 3 working days. Positive results are telephoned to the submitter.

NOTE: For public health surveillance, please submit all *N. gonorrhoeae* isolates to the laboratory. This is at no cost to the submitter (See Culture for Storage).

**CPT Codes:**
87081 (Culture screen) 87149 (ID) 87185 (beta lactamase)
Price: $35.00 Price: $31.00 Price: $6.50

Transport Temperature: Ambient

**Neisseria gonorrhoeae Direct Detection by Nucleic Acid Amplification**
Specimen Requirements: Endocervical, male urethral, throat or rectal swab in APTIMA Uni-Sex Swab Specimen Collection Tube, vaginal swab in APTIMA Vaginal Specimen Collection Tube, or urine in APTIMA Urine Specimen Collection Tube. See Chlamydia/Gonorrhea Amplified Testing Collection and Transport Instructions.

Turn-around Time: Routinely tested three (3) days/week (Monday, Wednesday, and Friday). Positive results are telephoned to the submitter.

NOTE: Can be run in tandem with *Chlamydia trachomatis* Direct Detection by Amplification (see Combination Amplification Test).

**CPT Code:** 87591
Price: $44.00

Transport Temperature: 2-30°C

**Neisseria spp. (including N. meningitidis) Culture Isolation /Identification/Typing**
Specimen Requirements: Primary specimen or isolate on chocolate media

Turn-around Time: 2 to 4 working days. Positive *N. meningitidis* results are telephoned to the submitter.

NOTE: Serogrouping is routinely performed on *N. meningitidis* isolates from sterile body sites such as blood or cerebral spinal fluid. Please submit all *N. meningitidis* isolates from sterile body sites to the laboratory for serogrouping and storage for future epidemiologic purposes.

**CPT Codes:**
87081 (Culture screen) 87185 (beta lactamase)
Price: $35.00 Price: $6.50

Transport Temperature: Ambient
Newborn Screening Panel
Specimen Requirements: Dried Blood Spots. See Newborn Screening Collection and Transport instructions.

Total Price: $112.25

Turn-around Time: 3 to 5 working days. Abnormal results are telephoned to the submitter. Contact the laboratory for further information.

* Tests referred to the Wisconsin State Newborn Screening Laboratory

The cost of reflex confirmatory testing (TSH, Hemoglobinopathies by HPLC and Cystic Fibrosis DNA Mutational Analysis) has been incorporated into the cost of the Newborn Screening panel, and no additional charges will be assessed.

**Nocardia spp. Culture Isolation/ Identification** *(see Fungal Culture)*

**Nocardia spp. Serology**
Specimen Requirements: 2 mL serum

Referred to the Centers for Disease Control, Atlanta, Georgia
Turn-around Time: 3 to 6 weeks.

**CPT Code:** 86744  
**Price:** $27.00

**Transport Temperature:** 2-30°C (Refrigeration preferable)

**Norovirus Direct Detection by Nucleic Acid Amplification**
Specimen Requirements: 2 mL stool in a sterile container. See Molecular (Nucleic Acid Amplification) Testing Collection and Transport instructions.

Turn-around Time: 1 to 3 working days. Positive results are telephoned to the submitter.

**CPT Code:** 87798  
**Price:** $100.00

**Transport Temperature:** 2-8°C

***O***

**Orthopoxvirus, including Variola (Smallpox), Direct Detection by Real Time PCR**
Specimen Requirements: Lesion swab in Universal Viral Transport Media plus an additional lesion swab transported dry in a sterile container.

**NOTE:** Contact your local health department or the State Epidemiology Department (406-444-0273) to ensure the patient meets criteria for testing. Please contact the Montana Public Health Laboratory prior to submission regarding sample collection and transport instructions.

A suspect Orthopoxvirus requires Infectious Disease packaging (Class 6.2) and trackable shipping. Please notify the laboratory by telephone at time of shipment.

Turn-around Time: 1 to 3 working days. Results are telephoned to the submitter.

**CPT Code:** 87798  
**Price:** Fee Waived

**Transport Temperature:** 2-8°C
Orthopoxvirus, Other Than Variola, Direct Detection by Real Time PCR
Specimen Requirements: Lesion swab in Universal Viral Transport Media plus an additional lesion swab transported dry in a sterile container. See Molecular (Nucleic Acid Amplification) Testing Collection and Transport instructions.

Turn-around Time: 1 to 3 working days. Results are telephoned to the submitter.

CPT Code: 87798
Price: Fee Waived

Transport Temperature: 2-8°C

Ova and Parasite Exam
Specimen Requirements: Stool transported in tubes containing Formalin and PVA or Total Fix preservative. Collect stool into a clean specimen container. Using the spoon inside the transport material, immediately transfer about 1 teaspoon of stool to a vial of 10% buffered formalin, and then transfer a similar quantity of stool to a vial containing PVA. Stool should be emulsified into the transport media. Formalin and PVA transport kits are available from the laboratory upon request.

For optimal recovery, a series of three (3) specimens should be submitted.

Turn-around Time: 1 to 2 working days. Positive results are telephoned to the submitter.

CPT Codes:
87177 (concentration/ID)       87209 (Trichrome stain)       Total Price: $46.00
Price: $23.00                  Price: $23.00

**Paratyphoid Fever** *(see Salmonella spp.)*

*Parvovirus Serology IgG & IgM by EIA*
Specimen requirements: 2 mL serum

Referred to the Oregon State Public Health Laboratory, Salem, OR
Turn-around Time: 2 to 4 weeks

**CPT Code:** 86747
Price: $27.00

Transport Temperature: 2-8°C

**Pasteurella spp. Culture Isolation/ Identification** *(see Bacterial Culture, Aerobic)*

**Penicillium spp. Culture Isolation/ Identification** *(see Fungal Culture)*

**Pertussis** *(see Bordetella pertussis)*

**Phenylalanine Monitor by Fluorescent Immunoassay**
Specimen Requirements: Dried Blood Spots. See Newborn Screening Collection and Transport instructions.

Used to monitor levels in patients diagnosed with phenylketonuria (PKU)

Turn-around Time: 1 to 2 working days. All PKU Monitor results are telephoned to the clinician of record.

**CPT Code:** 84030
Price: Fee Waived. Phone the laboratory for more information.

Transport Temperature: Ambient

**Pinworm Examination (Enterobius vermicularis)**
Specimen Requirements: Microscopic identification of eggs collected in the perianal area is the method of choice for diagnosing enterobiasis. In the morning, before defecation and washing, press transparent adhesive tape (“Scotch test”) on the perianal skin and then place the tape on a slide. Alternatively, the tape can be attached to the glass slide in a loop, and then folded over the glass surface after application to the perianal skin.

Turn-around Time: 1 to 2 working days. Positive results are telephoned to the submitter.

**CPT Code:** 87177 (concentration/ID)
Price: $23.00

Transport Temperature: Ambient
Plague (see Yersinia pestis Culture Isolation)

Plasmodium Detection
Specimen Requirements: Blood smear, thick and thin; unstained or stained with Giemsa or Wright’s Stain, and whole blood in EDTA tube (for possible PCR testing).

Turn-around Time: 1 to 2 working days. Positive samples for confirmation and specimens for PCR testing are referred to the Centers for Disease Control, Atlanta, Georgia.

CPT Code: 87207
Price: $31.00

Transport Temperature: Ambient

Plasmodium Serology by IFA
Specimen Requirements: 2 mL serum

Referred to the Centers for Disease Control, Atlanta, Georgia
Turn-around Time: 2 to 4 weeks

NOTE: Serology is performed only on patients whose blood slides are repeatedly negative, and have compatible travel history.

CPT Code: 86750
Price: $27.00

Transport Temperature: 2-30°C (Refrigeration preferable)

Pneumococcal Infection (see Streptococcus pneumoniae)

Premarital Testing (see Rubella IgG Serology)

Pseudomonas spp. Culture Isolation/ Identification (see Bacterial Culture, Aerobic)

Pulsed Field Gel Electrophoresis (PFGE) for Enterics
Specimen Requirements: Send Salmonella spp., Shigella spp., toxin-producing E. coli, Listeria spp., and Vibrio isolates on solid media or on swab in Cary-Blair transport medium.

*Testing is performed at no cost for epidemiological purposes.

For public health surveillance, please submit all isolates of Salmonella spp., Shigella spp., toxin-producing E. coli, Listeria spp., and Vibrio. Campylobacter spp. isolates are also encouraged when multiple isolates are identified.

CPT Code: None
Price: Fee Waived*

Transport Temperature: Ambient
**Pulsed Field Gel Electrophoresis (for other organisms)**

Specimen Requirements: Send non-fastidious Gram-negative rods or Gram-positive isolates on solid media or on swab in Cary-Blair transport medium.

NOTE: Minimum of three (3) isolates required. *Please contact the laboratory in advance regarding availability of testing for that isolate, and for the necessary number of isolates.*

**CPT Codes:**

- 83890 (molecular extraction)\text{ electrophoresis)}
  - Price: $34.50
- 83892 (enzymatic digestion)
  - Price: $26.50
- 83894 (enzymatic separation by gel)
  - Price: $26.50
- 83912 (interpretation and report)
  - Price: $26.50

Total Price: $114.00 per isolate

**Transport Temperature:** Ambient

---

**Q-Fever (Coxiella burnetti) Phase 1 and 2 IgG Serology by Indirect Immunofluorescence**

Specimen Requirements: 1 mL serum

Paired acute and convalescent serum specimens are recommended.

Turn-around Time: Routinely batch tested once per week. Positive results are telephoned to the submitter.

**CPT Code:** 86638

- Price: $22.00

**Transport Temperature:** 2-30°C (Refrigeration preferable)

---

**QuantiFERON – Gold (QFT – Gold) In-Tube Testing**

This assay is an in vitro test for the determination of latent Tuberculosis infection and can be used as an alternative to the TB skin test (PPD).

Specimen Requirements: Stimulated plasma, obtained from vacutainer tubes specifically coated with antigens. Requires access to a 37°C incubator. See QuantiFERON®-TB Gold In-Tube Testing Collection and Transport instructions.

Special pricing may be available when performing batch testing for one facility. Batch testing is defined as 20 or more specimens submitted from the same facility at the same time. *Please call the laboratory for additional information or pricing.*

Turn-around Time: Routinely batch tested on Monday, Wednesday, and Friday of each week. Positive results are telephoned to the submitter.

**CPT Code:** 86480 (Single Test)

- Price: $90.00

**Transport Temperature:** Ambient
Rabies Detection for Diagnostic Purposes (Animal Testing)
Animal testing is not performed by our laboratory.
Refer specimens to the Veterinary Diagnostic Laboratory in Bozeman, (406) 994-4885

Rabies Detection for Diagnostic Purposes (Human Testing)
Human Testing for Diagnostic Purposes, consult with the Epidemiology Section (406) 444-0273 for pre-approval prior to testing.
Consult the laboratory for specific sampling requirements and proper handling and transport.

Human Diagnostic Testing is referred to the Centers for Disease Control, Atlanta, Georgia.
Turn-around Time: Preliminary results (PCR) are available as soon as possible, usually the same day as receipt.

CPT Code: None
Price: Fee Waived

Transport Temperature: 2-8°C

**Rubeola (Measles) Direct Detection by Real Time PCR**

Specimen Requirements: Throat, nasopharyngeal or nasal Dacron swabs in viral transport media or 50 ml minimum of urine. Urine should be centrifuged 2500xg for 15 min at 4° C. Resuspend sediment in 2 ml viral transport media.  
*CSF may be submitted in meningitis/encephalitis-suspect cases with prior consult*

Note: Collect specimens as soon after the rash as possible. Detection is optimum with a collection the day one (1) through 3 (three) of rash onset.

Turn-around Time: 1 to 2 working days. Positive results are telephoned to the submitter.

**CPT Code:** 87798  
Price: $100.00

Transport Temperature: 2-8° C within 24 hours or freeze at -70° C and transport on dry ice.

**Rubeola (Measles) IgG Serology by EIA**

Specimen Requirements: 1 mL serum  
Screen or paired acute and convalescent specimens.

Turn-around Time: Routinely batch tested once per week. Significant results are telephoned to the submitter.
**CPT Code:** 86765  
Price: $22.00

Transport Temperature: 2-30°C (Refrigeration preferable)

**Rubeola (Measles) IgM Serology by Indirect Immunofluorescence**
Specimen Requirements: 1 mL serum  
Collect specimen at least two (2) days after onset of rash, and include date of onset.

Turn-around Time: Testing performed at North Dakota Public Health Laboratory as needed. Results are available within 2-3 days. Results are telephoned to the submitter.

**CPT Code:** 86765  
Price: $27.00

Transport Temperature: 2-30°C (Refrigeration preferable)

***S***

**Salmonella spp. (including S. typhi) Culture Isolation/Identification**
Specimen Requirements: Stool in Cary-Blair transport or other commercial enteric transport media, or isolate in Cary Blair transport or on solid media. See Enteric Panel for specific instructions.

Biochemically confirmed *Salmonella* spp. will be serotyped for epidemiologic purposes at no additional cost.

For public health surveillance, please submit all isolates of *Salmonella* spp. to the laboratory. [See Enteric Isolate Surveillance.](#)

Turn-around Time: 2 to 4 working days. Positive identification results are telephoned to the submitter.

**CPT Codes:**  
87045 (Culture ID)  
Price: $14.50  
87077 (Each add’l ID)  
Price: $20.00

Transport Temperature: 2-8°C for stool, ambient for isolates

**Shigella spp. Culture Isolation/Identification**
Specimen Requirements: Stool in Cary-Blair Transport, or other commercial enteric transport media, isolate in Cary Blair transport or on solid media. See Enteric Panel for specific instructions.

For public health surveillance, please submit all isolates of *Shigella* spp. to the laboratory. [See Enteric Isolate Surveillance.](#)

Turn-around Time: 2 to 4 working days. Positive results are telephoned to the submitter.

**CPT Codes:**  
87045 (Culture ID)  
Price: $14.50  
87077 (Each add’l ID)  
Price: $20.00

Transport Temperature: 2-8°C for stool, ambient for isolates
**Schistosoma Detection**
Specimen Requirements: Stool or urine in leak-proof sterile container

Turn-around Time: 1 to 2 working days. Positive samples are referred for confirmation to the Centers for Disease Control, Atlanta, Georgia

CPT Codes:
87177(Conc. ID)  
Price: $23.00  
87209 (Trichrome)  
Price: $23.00

Transport Temperature: Ambient for stool, 2-8°C for urine

**Sin Nombre Virus (see Hantavirus Serology)**

**Sporothrix Culture Isolation/ Identification (see Fungal Culture)**

**Schistosoma Serology by FAST-ELISA**
Specimen Requirements: 2 mL serum

Referred to the Centers for Disease Control, Atlanta, Georgia
Turn-around Time: 3 to 6 weeks

CPT Code: 86682
Price: $27.00

Transport Temperature: 2-30°C (Refrigeration preferable)

**Sporothrix Serology by Latex and/or Tube Agglutination**
Specimen Requirements: 2 mL serum

Referred to the Centers for Disease Control, Atlanta, Georgia
Turn-around Time: 3 to 6 weeks

CPT Code: 86317
Price: $27.00

Transport Temperature: 2-30°C (Refrigeration preferable)

**Staphylococcus spp. Culture Isolation/ Identification (see Bacterial Culture, Aerobic)**

**STEC (see Escherichia coli Shiga-Like Toxin Assay or Enteric Panel)**

**St. Louis Encephalitis IgM Serology by EIA**
This test may be ordered individually. Due to the cross-reactivity of West Nile Virus (WNV) and St Louis Encephalitis Virus (SLE), SLE serology may be performed on specimens with a borderline WNV test result.

Specimen Requirements: 2 mL serum and/or 1 mL CSF
Date of onset is required, and the city or county of patient’s residence is requested.
Referred to the Centers for Disease Control in Fort Collins, Colorado
Turn-around Time: 4 to 6 weeks

**CPT Code**: 86653  
Price: $27.00

Transport Temperature: 2-30°C (Refrigeration preferable)

**Stool Culture** *(see Enteric Panel)*

**Streptococcus Group A Screen, Culture Method**
Specimen Requirements: Throat swab in silica gel

Turn-around Time: Cultures are monitored for 2 working days prior to reporting as negative. Positive results are telephoned to the submitter

**CPT Code**: 87081 (Culture screen)  
Price: $35.00

Transport Temperature: Ambient

**Streptococcus pneumoniae Culture Isolation/ ID** *(see Bacterial Culture, Aerobic)*

**Streptococcus spp. Culture Isolation/ Identification** *(see Bacterial Culture, Aerobic)*

**Strongyloides Detection** *(see Ova and Parasite Exam)*

**Strongyloides Serology by EIA**
Specimen Requirements: 2 mL serum

Referred to the Centers for Disease Control, Atlanta, Georgia
Turn-around Time: 3 to 6 weeks

**CPT Code**: 86317  
Price: $27.00

Transport Temperature: 2-30°C (Refrigeration preferable)

**Syphilis Serology Screen (Qualitative) by VDRL**
Specimen Requirements: 2 mL serum or 1 mL CSF

Turn-around Time: Routinely batch tested twice per week. Positive results are reflexed to quantitative VDRL.

**CPT Code**: 86592  
Price: $14.50

Transport Temperature: 2-30°C (Refrigeration preferable)
Syphilis Serology Screen (Quantitative) by VDRL
Specimen Requirements: 2 mL serum or 1 mL CSF

Turn-around Time: Routinely batch tested twice per week. Significant results are telephoned to the submitter.

NOTE: Reflex confirmatory TP-PA testing is performed on all positive serum VDRL specimens.

CPT Code: 86593
Price $15.00

Transport Temperature: 2-30°C (Refrigeration preferable)

***T***

Tick-borne Disease IgG Serology Panel by IFA, Bacterial Agglutination
Includes RMSF, CTFV, Q-Fever, Tularemia and Brucella antibodies. The panel can be ordered with or without Lyme Disease antibodies.

Specimen Requirements: 3 mL serum
Paired acute and convalescent serum recommended.

Turn-around Time: Routinely batch tested once per week. Positive results are telephoned to the submitter. These tests may be ordered as a panel, but will be billed individually.

Note: Although not a tick-borne disease, Brucella testing is performed on all requests for Tularemia due to antigen cross reactivity.

CPT Codes:
86757 (RMSF) 86638 (Q-Fever) 86618 Lyme Screen
Price: $22.00 Price: $22.00 Price: $35.00

86790 (CTFV) 86668 (Tularemia) 86622 (Brucella)
Price: $22.00 Price: $22.00 Price: $22.00

Total Price: $145.00

Transport Temperature: 2-30°C (Refrigeration preferable)

Tick-borne Relapsing Fever (see Borrelia hermsii Serology)

Toxocara Serology by EIA
Specimen Requirements: 2 mL serum

Referred to the Centers for Disease Control, Atlanta, Georgia
Turn-around Time: 3 to 6 weeks

CPT Code: 86317
Price: $27.00

Transport Temperature: 2-30°C (Refrigeration preferable)
**Treponema pallidum** (See Syphilis Serology or **Treponema pallidum Particle Agglutination Assay**)

**Treponema pallidum Particle Agglutination Assay**
Specimen Requirements: 2 mL serum

Turn-around Time: Routinely batch tested once per week. Positive results are telephoned to the submitter.

**CPT Code:** 86780  
Price: $35.00

Transport Temperature: 2-30°C (Refrigeration preferable)

**Trichinella Serology**
Specimen Requirements: 2 mL serum

Referred to the Centers for Disease Control, Atlanta, Georgia  
Turn-around Time: 3 to 6 weeks

**CPT Code:** 86784  
Price: $27.00

Transport Temperature: 2-30°C (Refrigeration preferable)

**Trypanosomiasis Serology (including Trypanosoma cruzi / Chagas Disease)**
Specimen Requirements: 2 mL serum

Referred to the Centers for Disease Control, Atlanta, Georgia  
Turn-around Time: 3 to 6 weeks

**CPT Code:** 86682  
Price: $27.00

Transport Temperature: 2-30°C (Refrigeration preferable)

**Trypanosomiasis Detection (including Trypanosoma cruzi / Chagas Disease)**
Specimen Requirements: Blood smear, unstained or stained with Wright’s or Giemsa.

Turn-around Time: 1 to 2 working days. Positive smears are referred for confirmation to the Centers for Disease Control, Atlanta, Georgia

**CPT Code:** 87207  
Price: $31.00

Transport Temperature: Ambient

**Tuberculosis (See Mycobacterium spp.)**

**Tularemia Culture** (See *Francisella tularensis* culture)

PHL Lab Manual ver. 4.0 Effective February 2017
**Tularemia Serology** *(See *Francisella tularensis* serology)*

**Typhoid Fever (see Enteric Panel or *Salmonella spp.*)*

**Typhus Fever IgG Serology by Indirect Immunofluorescence**
Specimen Requirements: 2 mL serum
Paired acute and convalescent serum specimens are recommended.

Referred to the Centers for Disease Control, Atlanta, Georgia
Turn-around Time: 3 to 6 weeks

**CPT Code:** 86256
Price: $27.00

Transport Temperature: 2-30°C (Refrigeration preferable)

***U***

***V***

**Vancomycin Resistant Enterococci (VRE)** *(See Antimicrobial Resistant Bacteria Confirmation)*

**Varicella Zoster Virus (VZV) Direct Detection by Real Time PCR**
Specimen Requirements: Vesicular lesion swab in Universal Viral Transport Media. See Molecular (Nucleic Acid Amplification) Testing Collection and Transport instructions.

Turn-around Time: 1 to 3 working days. Positive results are telephoned to the submitter.

**CPT Code:** 87798
Price: $100.00

Transport Temperature: 2-8°C

**Varicella Zoster Virus (VZV) (Herpes Zoster Virus) IgG Serology by EIA**
Specimen Requirements: 1 mL serum
Screen or paired acute and convalescent specimens.

Turn-around Time: Routinely batch tested once per week; available each working day, as needed. Significant and STAT results are telephoned to the submitter.

To qualify for STAT testing, all of the following criteria must be met:

1. The patient is at high risk for complications and has been recently exposed to a known case of chickenpox. High risk patients are defined as immunocompromised persons, pregnant women, premature infants whose mothers are not immune, premature infants < 28 weeks gestation, and premature infants < 1000 grams at birth
2. The patient does not have a history of chickenpox and/or does not know their immune status.
3. Exposure has been recent enough that the 96-hour window for administration of VZIG is achievable if the testing determines the patient to be susceptible to VZV infection.
CPT Code: 86787  
Price: $22.00

Transport Temperature: 2-30°C (Refrigeration preferable)

**Varicella Zoster (VZV) (Herpes Zoster) Virus Culture Isolation/Identification**

Specimen Requirements: Specimen, usually vesicular fluid, in Universal Viral Transport Media, received within 48 hours of collection. See Viral Isolation/Culture Collection and Transport instructions.

Turn-around Time: Cultures are monitored for 1 month prior to a negative report. Positive results are telephoned to the submitter.

**CPT Codes:**

Transport Temperature: 2-8°C for stool, ambient for isolates

**Virus Culture Isolation/Identification**

Specimen Requirements: Specimen in Universal Viral Transport Media, received within 48 hours of collection. See Viral Isolation/Culture Collection and Transport instructions.

Turn-around Time: Cultures are monitored for 2 weeks prior to a negative report. Positive results are telephoned to the submitter.

NOTE: Specimens for virus isolation are screened for the presence of the following commonly isolated viruses: Adenovirus, Influenza A, Influenza B, Parainfluenza Type 1, 2, and 3, Respiratory Syncytial Virus, Enterovirus (including Coxsackie A & B and Echovirus) and Herpes Simplex Virus.

Transport Temperature: 2-8°C

***W***
**West Nile Virus IgG Serology by EIA**

Specimen Requirements: 1 mL serum. Paired acute and convalescent specimens recommended. Date of onset is required, and the city or county of patient’s residence is requested.

Turn-around Time: Routinely batch tested once per week; during seasonal outbreaks, testing may be performed each working day, depending on workload. Positive results are telephoned to the submitter.

**CPT Code:** 86789  
Price: $22.00

Transport Temperature: 2-30°C (Refrigeration preferable)

**West Nile Virus (WNV) IgM Serology by EIA**

NOTE: Serology is the recommended method of testing for WNV in both serum and cerebral spinal fluid (CSF), because viremia (as detected by PCR) is very transient.

Specimen Requirements: 1 mL serum and/or 1 mL CSF  
Date of onset is required, and the city or county of patient’s residence is requested.

NOTE: Negative results on specimens drawn less than 9 days from date of onset should have a convalescent serum tested if active disease is suspected.

Turn-around Time: Routinely batch tested once per week; during seasonal outbreaks, testing may be performed each working day, depending on workload. Positive results are telephoned to the submitter. Certain specimens may be referred to the Centers for Disease Control in Fort Collins, Colorado for confirmation using more specific Plaque Reduction Neutralization tests, and equivocal (borderline) results may be reflexed to St. Louis Encephalitis IgM Serology.

**CPT Code:** 86788  
Price: $22.00

Transport Temperature: 2-30°C (Refrigeration preferable)

***X***

***Y***

**Yeast Culture** *(see Fungal Culture)*

**Yersinia enterocolitica Culture Isolation/Identification**

Specimen Requirements: Stool in Cary-Blair transport, or other commercial enteric transport media, or isolate submitted in Cary-Blair transport or on solid media. Specify agent on request form.

Turn-around Time: 2 to 4 working days. Positive results are telephoned to the submitter.

**CPT Codes:**  
87046 (Culture ID)  
Price: $14.50  
87077 (Each add’l ID)  
Price: $20.00
Transport Temperature: 2-8°C for stool, ambient for isolates

**Yersinia pestis Culture Isolation/ Identification/Rapid Test Methods**
Specimen Requirements: Isolate submitted on solid medium or tissue transported cold in sterile saline.

*Note: A suspected Y. pestis culture requires Infectious Disease packaging (Class 6.2) and trackable shipping. Please notify the laboratory by telephone at time of shipment.*

*Please contact the laboratory prior to submission regarding environmental samples, rapid test methods, and transport instructions.*

Turn-around Time: Cultures will be held for five (5) working days before reporting as negative. Results are telephoned as soon as possible to the submitter. Rapid test methods are performed in Molecular Diagnostics and are available within 6 - 8 hours of specimen receipt.

**CPT Codes:**

Transport Temperature: 2-8°C for tissue, ambient for isolates

**Yersinia pestis Serology by Passive Hemagglutination**
Specimen Requirements: 2 mL serum

Referred to the Centers for Disease Control, Fort Collins, Colorado

Turn-around Time: 4 to 6 weeks

**CPT Code:** 86793

Price: $27.00

Transport Temperature: 2-30°C (Refrigeration preferable)

***Z***

**Zika MAC Elisa IgM**
Specimen Requirements: 50µl of serum or cerebral spinal fluid

Turn-around Time: This test takes three days to complete. Specimens are routinely batched and tested on Wednesdays, results available on Fridays. MTLSB will call significant results to the submitter.

*NOTE: A [Montana Zika Virus Infection Suspicion Checklist](#) should accompany the requisition, and the submitting facility should inform their local health department before sending specimens.*

**CPT Code:** 86790

Price: $80.00

Transport Temperature: Refrigerated (2-8°C or frozen)
Zika Virus Testing by CDC Trioplex Real-Time PCR Assay
This PCR assay detects Zika, Chikungunya, and Dengue Virus

Specimen Requirements: Serum only or serum and urine. Serum must be submitted with urine.
*Serum should be collected within <= 14 days of symptom onset in a separator (gold or tiger top tube) or decanted into a sterile screw-capped vial (labeled “serum”) and secured with parafilm
*1 ml aliquot of urine poured off into a sterile screw-capped vial (labeled “urine”) and secured with parafilm. Do not submit urine in its original collection container (i.e. urine cup)

Additional specimen types that are accepted with a consult include CSF and amniotic fluid.

Turn-around Time: Specimens are tested on the day of arrival and reported within 24 hours if accompanied by the completed testing form and local health department/Epi consult

NOTE: All testing requires a completed Montana Zika Virus Infection Suspicion Checklist. Contact your local health department or the State Epidemiology Department (406-444-0273) to ensure the patient meets criteria for testing.

CPT Code:
Urine and Serum: Serum only:
Price: $175.00 Price: $100.00

Transport Temperature: Store at 4°C and ship in a biohazard bag with cold packs within 48 hours of collection.
Montana Zika Virus Infection Suspicion Checklist

Local Public Health Jurisdictions: please complete this worksheet in consultation with the provider and submit to CDEpi if testing is requested.

Reason for Zika Test Request

How was the Patient Exposed to Zika Virus? (Please check the box in the below section then complete details for that exposure.)

- [ ] Travel to Zika impacted area(s)*
  a. Country or Specific Location of exposure: __________________________
  b. Travel Dates: ______/_____/______ to ______/_____/______
  - Arrival: ______/_____/______
  - Departure: ______/_____/______
- [ ] Unprotected sex with an exposed partner
  a. Country or Specific Location of exposure: __________________________
  b. Date(s) of sexual exposure: ______/_____/______ to ______/_____/______
  c. With a (circle) Male Female
  d. Did the partner have a positive Zika Test? (circle) Not tested Yes No
  e. Did the partner have symptoms of Zika infection? (circle) No Yes
  f. If yes, when was the onset date? ______/_____/______

Patient’s Clinical Presentation
(Please check the box for each symptom. If yes, onset date is required.)

- [ ] Maculopapular Rash
- [ ] Acute onset of Fever
- [ ] Conjunctivitis
- [ ] Arthralgia
- [ ] Guillan-Barre

If Pregnant, ______ Weeks ______ Days

Comments:

Clinical Disease and Vaccination History (Check box if yes.)

- [ ] Yellow Fever Disease
- [ ] Japanese Encephalitis
- [ ] Dengue

Would the provider like any information about Zika virus for you or your patients? If so, please describe.

Collection and Transport of Specimens

Chlamydia/Gonorrhea Amplified Testing Collection and Transport

The Unisex Swab Specimen Collection Kit, Vaginal Swab Specimen Collection Kit, and Urine Specimen Collection Kit are stored at room temperature.

Endocervical Swab Collection
1. Use the Unisex Swab Specimen Collection Kit (white label).
2. Remove excess mucus from the cervical os and surrounding mucosa using the white shafted cleansing swab. Discard the white shafted swab.
3. Insert the blue-shafted specimen collection swab into the endocervical canal.
4. Gently rotate the swab clockwise for 10 to 30 seconds in the endocervical canal to ensure adequate sampling.
5. Withdraw the swab carefully; avoid any contact with the vaginal mucosa.
6. Remove the cap from the swab specimen transport tube and immediately place the specimen collection swab into the transport tube.
7. Carefully break the blue swab shaft at the score line; use care to avoid splashing of contents.
8. Re-cap the swab specimen transport tube tightly.
9. Specimens should be clearly labeled with two patient identifiers (name, DOB, medical record number, etc.) and the collection date.

Vaginal Swab Collection
1. Use the Vaginal Swab Specimen Collection Kit (orange label).
2. Patient can collect own specimen in a health care facility. Vaginal swab collection is preferred over urine collection in women when a pelvic examination is not performed.
3. Insert the specimen collection swab into the vagina about two inches inside the opening of the vagina.
4. Gently rotate the swab clockwise for 10 to 30 seconds touching the walls of the vaginal to ensure adequate sampling.
5. Withdraw the swab carefully; avoid any contact with skin.
6. Remove the cap from the swab specimen transport tube and immediately place the specimen collection swab into the transport tube.
7. Carefully break the swab shaft at the score line; use care to avoid splashing of contents.
8. Re-cap the swab specimen transport tube tightly. Make certain the transport tube is labeled with a minimum of patient name; collection date is also helpful.

Male Urethral Swab Collection
1. Use the Unisex Swab Specimen Collection Kit (white label).
2. The patient should not have urinated for at least one hour prior to sample collection.
3. Insert the blue-shafted specimen collection swab 2 – 4 cm into the urethra.
4. Gently rotate the swab clockwise for 2 to 3 seconds in the urethra to ensure adequate sampling.
5. Withdraw the swab carefully.
6. Remove the cap from the swab specimen transport tube and immediately place the specimen collection swab into the transport tube.
7. Carefully break the blue swab shaft at the score line; use care to avoid splashing of contents.
8. Re-cap the swab specimen transport tube tightly.
9. Specimens should be clearly labeled with two patient identifiers (name, DOB, medical record number, etc.) and the collection date.

Rectal Swab Collection
1. Use the Unisex Swab Specimen Collection Kit (white label).
2. Use the small blue-shafted collection swab, **not the larger white shafted cleansing swab**.
3. Insert the small blue-shafted collection swab approximately 3 – 5 cm into the rectum and rotate against the rectal wall several times (at least 3 times).
4. Swabs that are grossly contaminated with feces should be discarded and the collection repeated.
5. Withdraw the swab carefully.
6. Remove the cap from the swab specimen transport tube and immediately place the specimen collection swab into the transport tube.
7. Carefully break the blue swab shaft at the score line; use care to avoid splashing of contents.
8. Re-cap the swab specimen transport tube tightly.
9. Specimens should be clearly labeled with two patient identifiers (name, DOB, medical record number, etc.) and the collection date.

**Throat Swab Collection**

1. Use the Unisex Swab Specimen Collection Kit (white label).
2. Use the small blue-shafted collection swab, **not the larger white shafted cleansing swab**.
3. Using a tongue depressor, insert the small blue shafted collection swab and vigorously rub the tonsils and the posterior pharynx.
4. Carefully remove the swab, not touching any area of the mouth.
5. Remove the cap from the swab specimen transport tube and immediately place the specimen collection swab into the transport tube.
6. Carefully break the blue swab shaft at the score line; use care to avoid splashing of contents.
7. Re-cap the swab specimen transport tube tightly.
8. Specimens should be clearly labeled with two patient identifiers (name, DOB, medical record number, etc.) and the collection date.
9. Complete the requisition form; be sure to record the specimen source.

**Urine Collection**

1. Use the Urine Specimen Collection Kit (yellow label).
2. The patient should not have urinated for at least one hour prior to sampling.
3. Direct patient to provide a first-catch urine (approximately 20 to 30 mL of the initial urine stream) into a urine collection cup. Collection of larger volumes of urine may reduce test sensitivity. Female patients should not cleanse the labial area prior to providing the specimen. This is NOT a clean-catch urine – we want the initial urine stream, which contains sloughed cells.
4. Remove the cap and transfer 2 mL of urine into the urine specimen transport tube using the disposable pipette provided. The correct volume of urine has been added when the fluid level is between the black lines on the urine specimen transport tube label.
5. Re-cap the urine specimen transport tube tightly. This is now known as the processed urine specimen.
6. Specimens should be clearly labeled with two patient identifiers (name, DOB, medical record number, etc.) and the collection date.

**Swab and Urine Specimen Transport**

After collection, ensure that specimens are properly labeled. Fill out the [standard laboratory request form](#).

Place the corresponding transport tube in an individual zip lock bag containing absorbent material and seal bag tightly. Place the form in the sleeve of the zip lock bag; DO NOT put the request form inside the zip lock bag.

Store swab specimen transport tubes and processed urine specimens (those in urine specimen transport tubes) at 2°C to 30°C. Place transport tubes in white mailing canisters and send to the laboratory by mail or courier.

**NOTE:** Although swab specimens in the specimen transport tube must be tested within 60 days of collection and urine specimens in the specimen transport tube must be tested within 30 days of collection, we advise you to submit specimens in a timely manner so that test results can be obtained as soon as possible.
Utilize the MTPHL courier service if available, or ship specimens to the following address:
Montana Public Health Laboratory
(Street Address)
1400 Broadway
Helena, MT 59601

Or
PO Box 4369
Helena, MT 59604-4369

Result Reporting
Positive results are telephoned to the provider; additionally, positive GC results are telephoned to the DPHHS STD Program.

Specimen Rejection
Specimens with unresolved labeling issues, leaking containers, expired containers, or with insufficient volume may be rejected. The provider will be notified and asked to resubmit.

Requests for Additional Information or Specimen Collection Questions:
For additional information or questions, or to order collection kits, contact the laboratory at 800-821-7284 or 406-444-3444.
**Molecular (Nucleic Acid Amplification) Testing Collection and Transport**

For technical assistance in determining proper specimen selection for specific agents, call the laboratory at 800-821-7284.

Universal Viral Transport Media for Viral Agents is supplied by the laboratory. Store the kits at room temperature.

<table>
<thead>
<tr>
<th>Specimen Type</th>
<th>Instructions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bronchial Alveolar Lavage (BAL) /Bronchial Washings</td>
<td>For Viral Agents, mix an equal portion of the BAL with Universal Viral Transport Media. Store in cold conditions and ship on cold packs. For Bacterial Agents, collect in sterile container. Store in cold conditions and ship on cold packs.</td>
</tr>
<tr>
<td>Cerebral Spinal Fluid (CSF)</td>
<td>Place 1 – 2 mL in sterile container <strong>without viral transport media</strong>. Store in cold conditions and ship on cold packs.</td>
</tr>
<tr>
<td>Cervical Swab</td>
<td>Place swab into Universal Viral Transport Media, break off at the score line, and tightly cap. Store in cold conditions and ship on cold packs.</td>
</tr>
<tr>
<td>Nasopharyngeal Aspirate</td>
<td>Introduce 1-2 mL of sterile saline into the nasopharyngeal cavity, aspirate into sterile vial. Store in cold conditions and ship on cold packs. *Note: If the specimen is also being submitted for viral agents, please submit in Universal Viral Transport Media. Store in cold conditions and ship on cold packs.</td>
</tr>
<tr>
<td>Nasopharyngeal Wash</td>
<td>Use only sterile saline to collect the NP wash. Instruct the patient to sit with head slightly tilted backwards, and to hold the sterile collection cup. Instruct the patient on how to constrict the muscles at the back of the throat by saying the “K” sound rapidly and repetitively. Inform the patient that this process may prevent the saline from draining down the throat. Fill a 5 cc syringe with warm sterile saline. Gently push the tip of the patient’s nose back with your thumb, and quickly inject 1 – 2 mL of sterile saline into each nostril. Instruct the patient to contain the saline in the nostrils for approximately 10 seconds while repetitively saying the “K” sound. After 10 seconds, ask the patient to tilt their head forward and collect the saline in the sterile cup. Cap the washings tightly. Refrigerate the nasopharyngeal washings until transport and ship on cold packs. *Note: If the specimen is also being submitted for viral agents, please submit in Universal Viral Transport Media. Store in cold conditions and ship on cold packs.</td>
</tr>
<tr>
<td>Nasopharyngeal Swab</td>
<td>Use a flexible wire dacron or polyester swab. Do not use Calcium Alginate swabs or swabs with wooden shafts. Instruct the patient to sit with head slightly tilted backwards. Bend the flexible wire in a small arc, and insert the swab into the nostril back to the nasopharyngeal cavity. The patient’s eyes will momentarily tear. Slowly rotate the swab as it is being withdrawn. For Viral Agents, place swab into Universal Viral Transport Media, trim swab shaft, and tightly cap. Store in cold conditions and ship on cold packs. For Bacterial Agents, place swab in sterile tube without transport.</td>
</tr>
<tr>
<td>Rectal swabs (for CRE)</td>
<td>Collection of paired rectal swab: Carefully insert both swab tips approximately one (1) cm beyond the anal sphincter and rotate gently. Do not collect highly soiled swabs. Place swab pair back in original transport tube. Swabs in the transport tube can be stored at 15-28°C for up to five days and transported at ambient temperature.</td>
</tr>
<tr>
<td>Specimen Type</td>
<td>Instructions</td>
</tr>
<tr>
<td>-----------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Serum</td>
<td>Collect 5-10 mL of whole blood in serum separator tube. Allow blood to clot, centrifuge and aliquot resulting sera. Store in cold conditions and ship on cold packs. If serum has already been frozen, ship on dry ice.</td>
</tr>
<tr>
<td>Stool</td>
<td>Collect at least 2 mL of stool in a leak-proof, clean, dry container. Do not add transport media. Store in cold conditions and ship on cold packs.</td>
</tr>
<tr>
<td>Throat Swab</td>
<td>Use a plastic-shafted Dacron swab. Do not use Calcium Alginate swabs or swabs with wooden shafts. Using a tongue depressor, insert the swab and vigorously rub the tonsils and the posterior pharynx. Carefully remove the swab, not touching any area of the mouth. For Viral Agents, place swab into Universal Viral Transport Media, trim swab shaft, and tightly cap. Store in cold conditions and ship on cold packs. For Bacterial Agents, place swab in sterile tube without transport.</td>
</tr>
<tr>
<td>Tissue Specimens</td>
<td></td>
</tr>
<tr>
<td>Autopsy or Biopsy</td>
<td>For Viral Agents, place each specimen in separate sterile containers containing small amounts of Universal Viral Transport Media. Store and ship on cold packs or dry ice. Do Not submit formalized tissue. For Bacterial Agents, place each specimen in separate sterile containers containing small amounts of sterile saline or PBS. Store and ship on cold packs. Do Not submit formalized tissue.</td>
</tr>
<tr>
<td>Vesicles/Vesicular Fluid/Scrapings</td>
<td>Aspirate fluid from multiple fresh unbroken vesicles and place into 1-2 mL of Universal Viral Transport Media. Remove the top of the vesicle and place the skin of the vesicle top into a sterile tube without transport. Store both samples in cold conditions and ship on cold packs.</td>
</tr>
<tr>
<td>Whole Blood</td>
<td>Collect 5-10 mL whole blood in EDTA anticoagulant. Store in cold conditions and ship on cold packs.</td>
</tr>
</tbody>
</table>

Specimens should be clearly labeled with two patient identifiers (name, DOB, medical record number, etc.), collection date and specimen source. Place each specimen container in an individual biohazard zip lock bag containing absorbent material and seal bag tightly.

Fill out the standard laboratory request form completely and place in the outer sleeve of the biohazard zip lock bag. Do not place the request form inside the biohazard zip lock bag.

Ship specimens promptly, maintaining cold temperature from collection until receipt at the laboratory. For those specimens that must be shipped in a cold condition, use cold packs and Styrofoam containers. Mailers will be returned for reuse. Transport by UPS, FedEx, mail or courier.
**Mycobacterium spp. (AFB or TB) Testing Collection and Transport**

All specimens are potentially infectious; handle carefully.

<table>
<thead>
<tr>
<th>Specimen</th>
<th>Collection Method</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sputum or Nebulized Sputum</td>
<td>Collect three early morning specimens on successive days (within 48 hours) and submit daily in separate containers. Good specimens are material brought up by the lungs after a productive cough or nebulization. Send a minimum of 5 mL in a sterile container.</td>
</tr>
<tr>
<td>Urine</td>
<td>Collect multiple first morning &quot;clean catch&quot; specimens on three successive days. Send a minimum of 40 mL in a sterile container.</td>
</tr>
<tr>
<td>Gastric</td>
<td>Collect three early morning fasting specimens on successive days. Send a minimum of 10 mL in a sterile container. Add 10 mg of sodium bicarbonate to neutralize the acidity. Send promptly after collection; these specimens should be processed as soon as possible.</td>
</tr>
<tr>
<td>Bronchial Washings</td>
<td>Submit first sputum specimen following bronchoscopy as well as the bronchial washings. Send a minimum of 5 mL in a sterile container.</td>
</tr>
<tr>
<td>Tissues</td>
<td>Collect aseptically and place in sterile container. Add about 1 mL sterile broth or sterile saline to tissues and swabs to prevent dehydration.</td>
</tr>
<tr>
<td>CSF or Other Sterile Body Fluids</td>
<td>Submit in sterile collection tube; at least 2 mL is needed for an adequate test.</td>
</tr>
<tr>
<td>Blood or Bone Marrow</td>
<td>Collect in heparinized tube or add sterile heparin (0.2 mg/mL) to prevent clotting. Send a minimum of 1 mL in a sterile container.</td>
</tr>
<tr>
<td>Stool</td>
<td>Submit 1 gram of raw stool in a sterile container. Send on ice.</td>
</tr>
<tr>
<td>Swab (Not Optimal)</td>
<td>Specimens submitted on swabs are discouraged. Please make every effort to submit tissue or aspirated fluid, as these are preferred sources.</td>
</tr>
</tbody>
</table>

Use only sterile materials in the collection of the specimen. Collect specimen directly into the sterile bottle provided or into a sterile container, refrigerate specimen until transported, and send as soon as possible. Specimens should be clearly labeled with two patient identifiers (name, DOB, medical record number, etc.) and collection date. Screw lid onto specimen container tightly so specimen does not leak; place each specimen container in an individual biohazard zip lock bag containing absorbent material and seal bag tightly.

Fill out the standard laboratory request form. Place form in outside sleeve of biohazard zip lock bag and put into TB mailing container. Respiratory specimens should be packaged and transported cold by mail or courier. All other specimens may be transported at ambient temperature.
# Mycology (Fungal) Culture Collection and Transport

<table>
<thead>
<tr>
<th>Specimen</th>
<th>Collection/Transport Instructions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tissue</td>
<td>Place tissue in sterile screw cap container and cover with 1 mL of sterile saline or broth. Refrigerate until time of mailing.</td>
</tr>
<tr>
<td>Blood</td>
<td>Collect 8 mL blood aseptically in a yellow Vacutainer tube (contains 0.05% SPS). This specimen can be used to inoculate a vented biphasic blood culture bottle containing TSB, TSA, or BHI agar and broth in a ratio of 1 part blood to 10 parts broth. Incubate at room temperature. Subculture onto Sabouraud's agar slants according to established procedures. Submit either slants or blood culture bottles for culture identification.</td>
</tr>
<tr>
<td>Bone marrow</td>
<td>Collect approximately 0.3 mL of bone marrow in a heparinized tube. Store specimen at room temperature or incubate until mailing. Ship in sterile screw cap container.</td>
</tr>
<tr>
<td>Bronchial wash,</td>
<td>Send in sterile screw cap container. May be sent in TB transport container. Refrigerate specimen until mailing.</td>
</tr>
<tr>
<td>Pleural fluid,</td>
<td></td>
</tr>
<tr>
<td>Joint fluid,</td>
<td></td>
</tr>
<tr>
<td>Sputum</td>
<td></td>
</tr>
<tr>
<td>CSF</td>
<td>Send a minimum of 1.0 mL in sterile screw cap container. Store specimen at room temperature or incubate until mailing.</td>
</tr>
<tr>
<td>Hair</td>
<td>Remove about 10 hairs with roots using forceps and send in a sterile container. NOTE: Hairs that break off at scalp level when using forceps must be removed with a knife. Scraping the scalp rarely yields infected hairs. Store and transport at room temperature.</td>
</tr>
<tr>
<td>Skin</td>
<td>Wipe lesions well with alcohol sponge (cotton will leave too many fibers on skin). Scrape the entire periphery of the lesion(s) with a sterile scalpel. Send scrapings in a sterile container. Store and transport at room temperature.</td>
</tr>
<tr>
<td>Nails</td>
<td>Clean nail with alcohol sponge. Scrape and discard outer portion of nail. Collect scrapings from inner nail and send in envelope or between glass slides. Send an entire nail, if it has been removed, in a sterile screw cap container. Store and transport at room temperature.</td>
</tr>
</tbody>
</table>

Please Note: Both a TB culture and a fungal culture can be processed from a single specimen by request. Make certain that test request form is clearly marked.

Place each specimen container in an individual biohazard zip lock bag containing absorbent material and seal bag tightly. Specimens should be clearly labeled with two patient identifiers (name, DOB, medical record number, etc.) and collection date.

Fill out the [standard laboratory request form](#). Place form in outside sleeve of biohazard zip lock bag and put into mailing container. Transport at ambient temperature by mail or courier.
Newborn Screening Collection and Transport

Newborn screening specimen cards for collection of dried blood spot samples are available from the laboratory. See Supply Request Form. These forms contain the requisition form along with the attached filter paper collection device.

Store specimen cards in a cool dry place on edge; flat stacking compresses the filter paper fibers. Do not handle the filter paper portion, as skin oils will prevent saturation.

Complete all the information on the requisition form legibly in block capital letters.

Sample Collection
The usual puncture site is illustrated below (shaded areas).

1. Sterilize and dry skin. Puncture heel with sterile lancet.
2. Allow large blood droplet to form.
3. Touch filter paper to blood and allow to soak through completely in each circle. Total saturation of the circles must be evident when the paper is viewed on both sides. Do not apply blood to both sides.
4. Be certain to properly fill all five (5) circles on the card. These need to all be satisfactory spots.
5. Use of capillary tubes is not recommended because they tend to roughen the filter paper and cause over absorption.
6. Allow blood spots to air dry thoroughly for 2-3 hours at room temperature. Keep away from direct sunlight and heat. Do not stack filter papers before thorough drying. Protective cover can be used to hold specimen while drying.
7. Cover with end flap only after specimen is completely dry.
8. Inspect the dried blood spots for adequacy prior to transport. Do not send unsatisfactory specimens.
9. Transport specimen by UPS or courier at ambient temperature within 24 hours of collection.

Note: Specimens may be UNSATISFACTORY if:
- All circles not completely filled (QNS)
- Blood is layered by application on both sides or by multiple spotting
- Filter paper is scuffed or torn
- Specimen is contaminated or improperly dried
- Information is incomplete
Capillary (Fingerstick Specimens) for Blood Lead Collection and Transport

Collection supplies are available free of charge by contacting the laboratory. Kits include:

| Two (2) Sterile Alcohol Preps | One (1) Capillary collection device | One (1) Transport zip lock bag |
| One (1) Lancet | One (1) Dry Sterile Gauze Pad | One (1) Instruction sheet |

Performing the Skin Puncture:

1. Thoroughly wash hands and don powder free gloves.
2. Select the puncture site. Blood can be obtained from:
   - fingertip (for adults and children older than 1 year)
   - the bottom of the big toe (infants only)
   - the heel (infants only)
3. Clean the puncture site with alcohol pad. If the site is extremely soiled or very cold, wash with warm soapy water and towel dry.
   Use the alcohol swab to briskly scrub the puncture site to remove any environmental contamination and to increase blood flow.
4. Allow the site to air dry or use the sterile gauze to dry the area.
5. Puncture the skin with the lancet.

Collection of the Sample:

1. Use the gauze to wipe off the first drop of blood, which contains excess tissue fluid. A rounded drop of blood will form over the puncture site. When the tip of the collection device touches this drop, blood will flow by capillary action into the tube. Care should be taken that the tip of the collection device is in contact with the blood only, not skin.
   Gently apply continuous pressure to the surrounding tissue; avoid milking the site.
   Important: The flow of blood must be adequate to fill the capillary rapidly. Do not stop to shake or tap the tube until the capillary is filled. Capillary must be held continuously in a horizontal position during the drawing of the blood.
2. After filling, turn the capillary device immediately to a vertical position to allow the blood to flow into the tube. Remove capillary with holder at the same time. Close tube with attached cap.
3. Apply pressure to the puncture site with a gauze pad to stop bleeding, while mixing the specimen by inverting a minimum of five times.
4. Identify each skin puncture specimen with the patient's name and collection date.

Submitting Specimens to the Laboratory for Testing:

1. Specimens should be clearly labeled with two patient identifiers (name, DOB, medical record number, etc.) and collection date.
2. Complete a standard laboratory request form to include the patient’s name, date of birth, gender, collection date, submitter information, and, if applicable, Medicaid billing information.
3. Place the well-mixed blood specimen container into the individual biohazard zip lock transport bag and seal bag tightly. Fold the requisition form and place in sleeve of the bag. Place the zip lock bag(s) into a preaddressed white mailing canister. Store the specimen(s) in the refrigerator until shipped. Specimens are stable for 7 days at refrigeration temperatures.
4. Specimens are transported at ambient temperature by mail or courier.

Results:

1. Laboratory test results will be mailed to the submitter upon completion of testing.
2. Should the initial test be elevated, a venous specimen will be requested for verification.
Venipuncture Specimens for Blood Lead Collection and Transport

Collection supplies are available free of charge by contacting the laboratory.

The Venipuncture Collection Kit includes:

- One (1) sterile alcohol preps
- One (1) transport zip lock bag
- One (1) needle and holder or one (1) needle and syringe
- One (1) dry sterile gauze pad
- One (1) Vacutainer EDTA tube
- One (1) instruction sheet

Preparation of the Puncture Site:
1. Thoroughly wash hands and don powder free gloves.
2. Expose the selected antecubital fossa and apply tourniquet to mid-biceps. Scrub the puncture site briskly with the alcohol pad to remove any environmental contamination and to increase blood flow.
3. Allow the site to air dry or use the sterile gauze to dry the area.

Collection of the Sample:
1. Prepare needle assembly, either needle and vacutainer holder, or needle and syringe.
2. Perform venipuncture per standard operating procedures. Make sure the vacutainer tube is completely filled before stopping collection. If using a needle and syringe, obtain a minimum of 2 mL of whole blood.
3. Remove tourniquet first, then needle from arm.
4. Apply pressure to the puncture site with a gauze pad to stop the patient’s bleeding. Parent/guardian or child may continue holding direct pressure on the puncture site.
5. If drawn directly into vacutainer tube, immediately mix the specimen manually by inverting a minimum of 10 times.
6. If drawn with a needle into the syringe, immediately inject the blood from the syringe into the vacutainer tube, gently mixing while filling. Continue to mix the specimen by inverting 10 times.
7. Dispose of used needle and syringe equipment into puncture proof Sharps container.
8. Identify each skin puncture specimen with the patient’s name, at a minimum, and collection date.

Submitting Specimens to the Laboratory for Testing:
1. Specimens should be clearly labeled with two patient identifiers (name, DOB, medical record number, etc.) and collection date.
2. Complete a standard laboratory request form to include the patient’s name, date of birth, gender, collection date, submitter information, and, if applicable, Medicaid billing information.
3. Place the well mixed, uncotted blood specimen in an individual biohazard zip lock bag containing absorbent material and seal bag tightly. Fold the requisition form and place in sleeve of the bag. Place the zip lock bag(s) into a preaddressed white mailing canister.
4. Store the specimen(s) in the refrigerator until shipped. Specimens are transported at ambient temperature by mail or courier. Specimens are stable for 7 days at refrigeration temperatures.

Results:
Laboratory test results will be mailed to the submitter upon completion of testing.
QuantiFERON®-TB Gold In-Tube Testing Collection and Transport

The QuantiFERON-TB Gold assay (QFT®) measures the Interferon-gamma (IFN-γ) response in whole blood stimulated with antigen. The kit uses specialized QFT blood collection tubes. The following is a guide for blood collection into these tubes.

Please read and follow the complete directions carefully!

Filling QuantiFERON®-TB Gold blood collection tubes

QuantiFERON®-TB Gold IT uses the following collection tubes; the set will be provided for you free of charge by calling 800-821-7284, or e-mailing mtphi@mt.gov.

1. Nil Control (Grey cap with yellow ring). The yellow designates a high altitude tube.
2. TB Antigen (Red cap with yellow ring).
3. Mitogen Control (Purple cap with yellow ring).

These procedures should be followed for optimal results:

1. Tubes should be at 17 - 25°C at the time of blood filling.
2. Collect 1 mL of blood by venipuncture directly into each QFT blood collection tube in the order Nil, TB-Antigen and Mitogen. As 1 mL tubes draw blood relatively slowly, keep the tube on the needle for 2-3 seconds once the tube appears to have completed filling to ensure that the correct volume is drawn.
3. The black mark on the side of the tubes indicates the 1 mL fill volume. QFT blood collection tubes have been validated for volumes ranging from 0.8 to 1.2 mL. If the level of blood in any tube is not close to the indicator line, it is recommended to obtain another blood sample.
   *If a “butterfly needle” is used, prime tubing with a “purge” tube before filling the QFT tubes.

Mixing Tubes

1. Antigens have been dried onto the inner wall of the blood collection tubes. It is essential that the tubes’ contents be thoroughly mixed with the blood. Thorough mixing will dissolve the heparin, preventing clotting, and allow resolubilization of the stimulating antigen. Mixing is performed by shaking, not just inverting, the tubes vertically ten (10) times, firmly enough to ensure that the entire inner surface of the tube is coated with blood. **Over-energetic shaking may cause gel disruption and could lead to aberrant results.**
2. Label tubes appropriately. Ensure each tube (Nil, TB Antigen, Mitogen) is identifiable by its label or other means once the cap is removed.

Incubation of Tubes

1. Following filling, shaking and labeling, the tubes must be transferred to a 37°C ± 1°C incubator as soon as possible, and within 16 hours of collection. If the blood is not incubated immediately after collection, re-mixing of the tubes by inverting 10 times must be performed immediately prior to incubation.
2. Incubate the tubes **UPRIGHT** at 37°C ± 1°C for 16 to 24 consecutive hours. The incubator does not require CO₂ or humidification.
3. If tubes are not incubated on site, maintain tubes at room temperature (22°C ± 5°C). Do not refrigerate or freeze the blood samples. Tubes must be received in the Public Health Laboratory within 16 hours of collection for incubation.
4. Following 37°C ± 1°C incubation, blood collection tubes may be transported between 2°C and 27°C. Specimens must be received in the Public Health Laboratory within 3 days of incubation. If this is not possible, call MTPHL for direction.
5. Complete a blue MTPHL requisition form; include date and TIME of draw, and whether or not the specimen(s) have been incubated prior to shipment. Please note this information in the Comments/Pertinent Information section of the blue form.

QUESTIONS? Contact the MTPHL at 800-821-7284 or mtphi@mt.gov

PHL Lab Manual ver. 4.0 Effective February 2017
## Serology Specimens Collection and Transport

**TESTING POLICY:** If a convalescent specimen is received, it will be tested in parallel with the original acute specimen, and only the convalescent specimen will be billed.

<table>
<thead>
<tr>
<th>Specimen Type</th>
<th>Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Acute serology specimen</strong></td>
<td>The DATE OF ONSET of symptoms or disease is less than 7 days from the date serum is obtained, usually the first few days of the illness. IgG antibody titers are not elevated. Exceptions: Rubeola, Rubella, and Colorado Tick Fever and Rocky Mountain Spotted Fever may have a significant IgG titer in 7-10 days.</td>
</tr>
<tr>
<td><strong>Convalescent serology specimen</strong></td>
<td>The DATE OF ONSET of symptoms or disease is 2 weeks or greater from the date serum is obtained. IgG antibody levels should be at a significant level. Exception: Legionella sp. antibody levels may not be significant for 4-6 weeks.</td>
</tr>
<tr>
<td><strong>Serology screen only</strong></td>
<td>The patient has a chronic condition, with the DATE OF ONSET of symptoms or disease being a very long period (months to years, OR patient is being screened for antibodies to a certain infectious agent (HIV, Hepatitis B, Rubella, VZV, etc.) ALTERNATIVELY, IgM testing is available. Single specimen test results may be difficult to interpret and an additional specimen may be requested if results warrant.</td>
</tr>
<tr>
<td><strong>Post-convalescent serology specimen</strong></td>
<td></td>
</tr>
</tbody>
</table>

Submit approximately 2 - 4 mL of clear non-hemolyzed serum for testing. Contact the laboratory for exact volumes needed if serum is difficult to obtain. Serum separator tubes can be used. Spin the SST tubes well to completely separate the serum and cells and submit the whole tube. Serum does not have to be poured off. DO NOT submit unspun SST tubes. If serum is not submitted in the original SST tube, place in a leakproof container.

Cerebral Spinal Fluid (CSF) may also be submitted for serological testing in certain instances. A serum sample should also be submitted with the CSF for comparison testing.

Specimens should be clearly labeled with two patient identifiers (name, DOB, medical record number, etc.) and collection date. Completely fill out the [standard laboratory request form](#).

Place each specimen container in an individual biohazard zip lock bag containing absorbent material and seal bag tightly. Place the completed laboratory request form in the outer sleeve of the biohazard zip lock bag. Do not place the completed laboratory request form inside the zip lock bag.

If specimen is stored prior to shipment, store at 4°C. If storage is longer than 1 week, freeze the specimen. Specimens may be shipped at room temperature. Labeled pre-addressed mailing canisters are available from the laboratory. Transport by mail or courier.
Viral Isolation/Culture Collection and Transport

Universal Collection Kits, containing swabs and transport media, are supplied by the laboratory. Store the kits at room temperature. The expiration date is printed on the collection kits. This same media is used for Chlamydia isolation.

<table>

</tr>
</tbody>
</table>

Specimens should be clearly labeled with two patient identifiers (name, DOB, medical record number, etc.) and collection date. Place each specimen container in an individual biohazard zip lock bag containing absorbent material and seal bag tightly.

Fill out the [standard laboratory request form](#) completely and place in the outer sleeve of the biohazard zip lock bag. Do not place the request form inside the biohazard zip lock bag.

Specimens must be kept cold from the time they are collected until the time they are processed by the laboratory. Shipment must be done promptly, so that specimens are received by the laboratory within 48 hours of collection. Specimens must be shipped in a cold condition, usually by the use of cold packs and Styrofoam containers. The mailers will be returned for reuse. Transport by mail or courier.
Clinical Laboratory Requisition Forms

Requisition forms are available by calling the laboratory at 800-821-7284:

The standard laboratory request form, preprinted with your account information; all clinical testing can be ordered with this form.

A newborn screening panel form: this form contains the dried blood spot collection kit.

Examples of each form are included on the following pages, as well as specific instructions on filling out the Newborn Screening form.

General Instructions:

Please fill the forms out completely to include (at a minimum):

Patient Last Name or anonymous identifier (required)
Patient First Name
Patient ID #
Date of Birth
Gender
Medicaid # (if applicable)
NPI (or UPIN) # of Physician/Clinician (preferred)
Physician/Clinician Name (if NPI is not provided)
Specimen Collection Date (required)
Date of Onset of Illness (for serology and molecular testing)
Source of Specimen (If source is serum, indicate if the serum is acute, convalescent, or a screen only)
Test(s) Ordered

There will need to be two forms of patient identification on both the requisition form and the submitted specimen for the submission to be acceptable.

NOTE: Forms are read using an optical scanning device. Please print information clearly in boxes indicated. Do not use preprinted labels or stamps.

## Test(s) Requested Information

### Serology:

- Blood Lead
- Brucella Antibody
- CTFV IgG Serology
- Hantavirus IgG & IgM Serology
- Hepatitis A Acute Panel
- Hepatitis A IgM Antibody
- Hepatitis B Surface Antigen
- Hepatitis B Surface Antibody
- Hepatitis B Total Core Antibody
- Hepatitis B Core IgM Antibody
- Hepatitis C As with Reflex as needed
- Herpes Simplex Virus IgG Serology
- HIV Ab/Ag Combo with Reflex Confirmation
- Legionella IgG Serology
- Lyme Abs Total with Reflex Confirmation
- Mumps IgG Serology
- Q Fever IgG Serology
- RMSF IgG Serology
- Rubeola (Measles) IgG
- Syphilis Screen with Reflex Confirmation
- Syphilis Confirmation (TP-PA)
- TB - Quantiferon Gold In-Tube Testing Time Collected
- Tashir Barn Disease Panel + Lyme
- Tick Borne Disease Panel + Lyme
- Tick Borne Disease Panel
- Tuberculosis Antibody
- Varicella Zoster Virus IgG
- West Nile Virus IgM
- West Nile Virus IgG

### Molecular Testing:

- Adenovirus PCR
- Bordetella pertussis multigene PCR
- C difficile/NAP1 PCR
- Enterovirus PCR
- EnteroVirus D68 PCR

### STD Testing (APTIMA):

- Chlamydia and Gonorrhea
- Chlamydia Only
- Gonorrhea Only

### Sterilizer Monitoring:

- Autoclave Monitoring-BT Test

### Microbiology:

- Bacteriology Culture/ID, Aerobic
- Bacteriology Culture/ID, Anaerobic
- BT Agent Rule Out (list in comments)
- EHEC (STEC) Toxin Test
- Enteric Panel Culture, Includes EHEC
- Fungus Culture/ID
- Legionella Direct Detection/Culture/ID
- Malaria Screen
- Modified Acid Fast Stain
- Neisseria gonorrhoeae Culture/ID
- Vibrio screen
- Yersinia screen
- Cryptosporidium/Giardia EIA screen
- Cryptosporidium/Cyclospora Detection
- Ova and Parasite Exam

### Chlamydia Culture:

- Chlamydia Culture

### ZIka Testing:

- ZIka Serology (IgM)
- ZIka Triplex PCR Serum
- ZIka Triplex PCR Serum/Urine Combo

### Surveillance Cultures:

- Type of Isolates:
  - CRE Confirmation
  - ESKL Confirmation
  - GC Confirmation/Susceptibility
  - Influenza Confirmation
  - MRSA Confirmation
  - Salmonella/Shigella/E. coli/Campy
  - VRE Confirmation
  - Other Surveillance Confirmation

### Virus Culture:

- CNS Virus Isolation
- Cytomegalovirus Isolation
- Enteric Virus Isolation
- Herpes Simplex Virus (HSV) Isolation
- Respiratory Virus Isolation
- RSV Direct Detect
- Varicella Zoster Virus (VZV) Isolation
- Virus Isolation (Other)

### TB/Mycobacteriology:

- TB Mycobacteria Smear/Culture/ID
- M. tuberculosis NAAT (Molecular)

**Specimen Collection Date:**

- 

**Date of Onset:**

- 

**Medicaid / Medicare Billing Information:**

- [ ] Bill MEDICAID
- [ ] Bill MEDICARE
- [ ] Outpatient
- [ ] MEDICAID or MEDICARE NUMBER

**ICD Diagnosis Code:**

- 

**Other Test(s) Requested/Pertinent Information/Comments:**

-

PHL Lab Manual ver. 4.0 Effective February 2017
Newborn Screening Requisition Form

This form has attached special filter paper for collection of the blood spots.

All information contained on the form must be completed.

Complete the patient information (name, sex, ID#, race, and ethnicity) as well as the mother’s name and baby’s provider. It is important to specify the provider that will be providing care for the infant once he or she is released from the hospital. We will not accept hospitalists or obstetricians in this field.

Mark the specimen as to whether this is the first screen performed on the baby, or repeat screen. If the baby was screened at the hospital, and then is followed up with a repeat test at the physician’s office, mark the repeat box.

Accurately complete the birth date and time and the specimen collection date and time. Samples obtained from a child less than 24 hours old must be repeated.

Complete the birth weight in grams.

Answer the questions on transfusion history. In cases when the baby received a transfusion, please include the date of transfusion.

If the baby is on TPN (Total Parenteral Nutrition) at the time of collection, please indicate that on the form.

This same form can be used for monitoring Phenylalanine levels on patients with known PKU disease.

Packaging and Shipping Guidelines

It is the responsibility of the facility to ensure proper packaging and shipping of all potentially infectious and biological substances. Listed below are some general guidelines and links to websites that will provide more detailed information.

Category A (UN2814 “Infectious Substance Affecting Humans”): “An infectious substance in a form capable of causing permanent disability or life-threatening or fatal disease in otherwise healthy humans or animals when exposure to it occurs. An exposure occurs when an infectious substance is released outside of its protective packaging, resulting in physical contact with humans or animals. Classification must be based on the known medical history or symptoms of the source patient or animal, endemic local conditions, or professional judgment concerning the individual circumstances of the source human or animal. Category A poses a higher degree of risk than Category B.”

Category B (UN 3373 “Biological Substance, Category B”): “An infectious substance NOT in a form generally capable of causing permanent disability or life-threatening or fatal disease in otherwise healthy humans or animals when exposure to it occurs. This includes Category B infectious substances transported for diagnostic or investigational purposes.”

Exempt Human Specimens: Exempt Human Specimen label indicates there is no infectious substance in the package. (Examples include fecal occult blood and dried blood spots.)
