Access to Health Care
994 American Indians in the Rocky Boy’s Community are enrolled in Medicaid Expansion. Members can access health care services at the Rocky Boy Health Center or at a provider of their choice.

Rocky Boy Health Center
The Chippewa Cree Tribe has a compact with the federal government that allows the Tribe to design and deliver their own health care services. With Medicaid Expansion, the Tribe’s Health Center has now been able to either offer or refer for additional services such as prenatal care, mammograms, colonoscopies, hip replacements, and other essential specialty consultations and surgical procedures. This change affects all American Indian people living on or near the Rocky Boy’s Reservation, not only Medicaid recipients.

Access to Quality Health Care Services
In the Rocky Boy’s Community, Medicaid Expansion allowed for:
- 978 American Indians to receive preventive services.
- 33 American Indians to receive colonoscopies, and 8 possible cases of colon cancer to be averted.
- 40 American Indian women to receive breast cancer screening.
- 3 American Indian to be newly diagnosed and treated for diabetes, which will prevent many costly complications such as kidney failure and dialysis in the future.
- 372 American Indian adults have received outpatient mental health services.
- 261 American Indian adults are now in treatment for substance use disorders.

Increased Revenues
Medicaid Expansion has increased revenues for the Chippewa Cree Tribe. Over the last two state fiscal years the Chippewa Cree Tribe has received an additional $4.7 million dollars in 100% federal reimbursement. This increased revenue is the means to provide additional services to individuals within the Rocky Boy’s Community. Having the ability to provide preventive care services within the community is making a difference in the lives of people and supports the overall mission of a healthy membership while reducing the health disparity that exists in Montana.
Background: Health and Healthcare Challenges for American Indians

American Indian people in Montana have substantially higher rates of illness and mortality than other Montana residents. For example:

- American Indian people in Montana die, on average, 18 years younger than other Montanans.¹
- The death rate for American Indian people in Montana is far higher than other Montanans for many common illnesses, including heart disease, cancer, injuries, and diabetes.²
- American Indian people in Montana suffer high rates of mental distress and suicide. 15% of American Indian people in Montana report frequent mental distress compared with 10% of all Montana adults. The suicide rate for American Indian people in Montana is estimated at 29 per 100,000 Montana residents, compared with 23 per 100,000 all Montanans, and 13 per 100,000 for U.S. residents.³

American Indian people in Montana face serious barriers to receiving health care, including:

- The federal Indian Health Service (IHS) budget allows for $4,078 per capita, compared with $10,692 for the Veterans Health Administration, and $13,185 for Medicare. This long-standing underfunding of health care for American Indian people makes it difficult or impossible for people to access medically-necessary health care services.⁴
- Health care for American Indian people living in urban areas is even more severely underfunded, accounting for less than 1 percent of the total IHS budget.⁵
- Before Medicaid expansion, members could not access most medical services except basic primary care and in many cases, could not receive, for example: cancer screenings like mammograms and colonoscopies, consultation with specialists, surgeries such as hip replacements and gall bladder removals, and many others. This is because the IHS budget only allowed referrals for life-threatening emergencies, specifically “emergent or acutely urgent care services that are necessary to prevent the immediate death or serious impairment of the health of the individual and if the diagnosis and treatment of injuries or medical conditions is left untreated, would result in uncertain but potential grave outcomes.”⁶

About the Chippewa Cree

The Rocky Boy’s Indian Reservation, located in northcentral Montana and encompassing 122,000 acres, is a part of Hill and Chouteau counties. The Chippewa Cree Business Committee is the governing body and is responsible for exercising all powers of government under the Constitution and By-laws. The closest major health facilities are in Havre (22 miles) and Great Falls (81 miles). Tribal headquarters is in Rocky Boy Agency, Montana.
