Impact of Medicaid Expansion in the Crow Community

Access to Health Care
1,826 American Indians in the Crow Community are enrolled in Medicaid Expansion. Members can access health care services at any of the Indian Health Service facilities such as the Crow/Northern Cheyenne Hospital in Crow Agency, the IHS Health Clinic in Lodge Grass, or the Pryor Health Station, Crow Tribal Health providers, or a provider of their choice.

Crow Indian Health Service Unit
The local IHS facility has a five-level priority system for care and has historically operated at a Level 1, often referred to as “life or limb.” Due to Medicaid Expansion, they are currently operating at a Level 4 and can now either offer or refer for additional services such as prenatal care, mammograms, colonoscopies, hip replacements, and other essential specialty consultations and surgical procedures. Referrals have increased by 140%. This change affects all American Indian people living on or near the Crow Reservation, not only Medicaid recipients.

Access to Quality Health Care Services
In the Crow Community, Medicaid Expansion allowed for:
- 1,565 American Indians to receive preventive services.
- 97 American Indians to receive colonoscopies, and 33 possible cases of colon cancer to be averted.
- 20 American Indian women to receive breast cancer screening.
- 16 American Indians to be newly diagnosed and treated for diabetes, which will prevent many costly complications such as kidney failure and dialysis in the future.
- 342 American Indian adults have received outpatient mental health services.
- 118 American Indian adults are now in treatment for substance use disorders.

Increased Revenues
Medicaid Expansion has increased revenues for the Crow IHS Service Unit and created new billing opportunities for the Crow Tribe. Over the last two state fiscal years, these IHS and Tribal Health organizations have received an additional $9.9 million dollars in 100% federal reimbursement. This increased revenue is the means to provide additional services to individuals within the Crow Community. Having the ability to provide preventative care services within the community is making a difference in the lives of people and supports the overall mission of a healthy membership while reducing the health disparity that exists in Montana.
Background: Health and Healthcare Challenges for American Indians
American Indian people in Montana have substantially higher rates of illness and mortality than other Montana residents. For example:

- American Indian people in Montana die, on average, 18 years younger than other Montanans.\(^1\)
- The death rate for American Indian people in Montana is far higher than other Montanans for many common illnesses, including heart disease, cancer, injuries, and diabetes.\(^{ii}\)
- American Indian people in Montana suffer high rates of mental distress and suicide. 15% of American Indian people in Montana report frequent mental distress compared with 10% of all Montana adults. The suicide rate for American Indian people in Montana is estimated at 29 per 100,000 Montana residents, compared with 23 per 100,000 all Montanans, and 13 per 100,000 for U.S. residents.\(^{iii}\)

American Indian people in Montana face serious barriers to receiving health care, including:

- The Indian Health Service (IHS) budget allows for $4,078 per capita, compared with $10,692 for the Veterans Health Administration, and $13,185 for Medicare. This long-standing underfunding of health care for American Indian people makes it difficult or impossible for people to access medically-necessary health care services.\(^{iv}\)
- Health care for American Indian people living in urban areas is even more severely underfunded, accounting for less than 1 percent of the total IHS budget.\(^{v}\)
- Before Medicaid expansion, members could not access most medical services except basic primary care and in many cases, could not receive, for example: cancer screenings like mammograms and colonoscopies, consultation with specialists, surgeries such as hip replacements and gall bladder removals, and many others. This is because the IHS budget only allowed referrals for life-threatening emergencies, specifically “emergent or acutely urgent care services that are necessary to prevent the immediate death or serious impairment of the health of the individual and if the diagnosis and treatment of injuries or medical conditions is left untreated, would result in uncertain but potential grave outcomes.”

About the Crow
The Crow Indian Reservation, which is a part of Big Horn and Yellowstone counties, is the largest reservation in Montana encompassing approximately 2.2 million acres in southcentral Montana. About 75 percent of the Crow Tribe’s approximately 10,000 or more enrolled members live on or near the Reservation. The Crow Tribal Council is the governing body of the Crow Tribe of Indians and is made of up three branches of government, the Executive, Legislative and Judicial Branches. Tribal headquarters is in Crow Agency, Montana.
