**HIV PREVENTION TODAY**

Relationship Building & Whole-Person Care

---

**Primary HIV Prevention**

reduces risk of becoming HIV positive

- Test high risk individuals
- Offer pre-exposure Prophylaxis (PrEP), a daily pill to keep HIV negative people from becoming infected.

---

**Secondary HIV Prevention**

reduces risk of infecting others

- Ensure people living with HIV receive needed housing and other social services.
- Provide medication and adherence support to reduce viral load.

---

**Initial HIV Testing**

- **NEGATIVE**
  - Percent negative—a measure of primary prevention success
  - Retesting
  - Followup

- **POSITIVE**
  - Percent positive—a measure of primary prevention failure
  - Lower risk of HIV transmission by helping HIV positives decrease viral load to undetectable levels.

---

**HIV Care Continuum**

- Initial HIV Testing
  - People living with HIV in MT in 2015
  - In appropriate care*
  - Virus undetectable*

- Followup
  - Percent negative—success
  - Percent positive—failure

- Retesting
  - Lower risk of HIV transmission by helping HIV positives decrease viral load to undetectable levels.
