The National Immunization Survey is a random digit-dialing telephone survey followed by a mailed survey to children’s immunization providers. This survey collects data on vaccination status of children who are or will be 19-35 months during the survey year.

**Actions Montana is Taking to Increase Immunization Rates**

1. Building new functionality into imMTrax so clinics can review coverage levels real-time.
2. Providing monthly missing immunization reports to participating providers.
4. Proposing a rule change for immunization requirements for licensed child care facilities to more closely align with the ACIP.

How does Montana compare to the U.S.?

The data below is from the 2016 National Immunization Survey.

- **4+ DTaP**
  - MT 76.2%
