Cancer on the Crow Reservation

This fact sheet provides information describing the burden of cancer among American Indians living on or near the Crow Reservation. American Indian residents of Big Horn and Yellowstone Counties were used to estimate the burden of cancer on the Crow Reservation.

Key Facts about cancer on the Crow Reservation

- 529 American Indians on the Crow Reservation were diagnosed with cancer from 2008 — 2017. That is about 53 new cases of cancer each year.
- Cancer incidence on the Crow Reservation was greater than among white Montanans living in the Crow Reservation counties and statewide (Figure 1).
- Five (5) kinds of cancer account for 77% of all cancers that occur on the Crow Reservation (Figure 2).
- Significantly more cases of colorectal and kidney cancer were diagnosed in American Indians on the Crow Reservation than would be expected if the rate were the same as white residents.
- 139 American Indians on the Crow Reservation died because of cancer from 2008—2017. That is about 14 deaths each year.

Updated September 2019
• Cancer mortality on the Crow Reservation was not significantly different than that among white Montanans in the reservation counties and statewide (Figure 3).

Key facts about cancer prevention and early detection

• Less than half (47%) of Montana American Indian adults have been screened for colorectal cancer—which was lower than White Montanans and the United States average (Figure 4).

• Smoking among Montana American Indians was high (Figure 5). Smoking greatly increases a persons risk for getting at least 13 types of cancer, including lung, colorectal, and kidney.

• Obesity was also high among Montana American Indians (Figure 5). Obesity increases the risk of several types of cancer including breast, colorectal, and kidney cancers.

Reduce Your Risk for Cancer

Do not use commercial tobacco.

Get screened regularly for breast, cervical, and colorectal cancers.

Maintain a healthy weight by getting regular physical activity and eating a diet with lots of fruits and vegetables.

If you drink alcohol, do so in moderation.

†Women aged 50+ who have had a mammogram within the past two years were up to date on breast cancer screening; women aged 21-65 years who have had a pap test within the past three years were up to date on cervical cancer screening; men and women aged 50-75 who have had colonoscopy in the past 10 years, flexible sigmoidoscopy in the past 5 years, or a blood stool test in the past 1 year were up to date on colorectal cancer screening.
