Subject: DPHHS HAN ADVISORY 2009-39: Delayed Vaccine Recovered for Shipment and Updated Guidance for CSL's 2009 H1N1 Monovalent Vaccine
Attachments: REVISED Vaccine Allocation 11_04_09.pdf; Updated Guidance for the use of CSL.DOC

State of Montana DPHHS HAN ADVISORY

Monday, November 16, 2009

Forwarding Instructions:

Please review the special forwarding instructions below.

DPHHS Information / Recommendations:

Do not forward this part of the information this is for health department use only.

Delayed Order Recovered and Shipped

The November 4th H1N1 vaccine order sent to the State Depot was recovered and is being shipped. A revised allocation table has been posted to the TCC H1N1 Resource Room for the November 4th order. The revision includes an exclusion of the MedImmune LAIV doses which are not available at this time. The original allocation for injectable doses remains the same as previously posted. The LAIV doses will be available at a later time.

Jurisdictions that have vaccine shipped from the State Depot can anticipate receiving both the November 4th (minus LAIV) and 10th allocation this week.

Share this information with selected providers.

Updated Guidance for the use of CSL's 2009 H1N1 Monovalent Vaccine

On November 11, 2009, the FDA expanded the approved use of CSL's seasonal and 2009 H1N1 monovalent influenza vaccines to include children aged 6 months and older.

The immediate effect on the national H1N1 flu vaccination program is that CSL's pre-filled syringe and multi-dose vial formulations can now be used in a substantially broader range of ages.

Both the CSL H1N1 pre-filled syringe and multi-dose vial vaccine formulations should be reserved for individuals aged 3 years and older if alternative products for children 6-35 months are available.

The attached document contains the CDC description and rationale.

You have received this message based upon the information contained within our emergency notification data base. If you have a different e-mail or fax address that you would like us to use please notify us as soon as possible by e-mail at hhshan@mt.gov.

The goal of Montana's Health Alert Network is to transmit information to local public health authorities as quickly as possible, and assign a suitable priority to the message. For questions or comments about Montana's HAN system you may contact the DPHHS HAN Coordinator, Gerry Wheat at gwheat@mt.gov.

Categories of Health Alert Messages:

Health Alert: conveys the highest level of importance; warrants immediate action or attention.

Health Advisory: provides important information for a specific incident or situation; may not require immediate action.

Health Update: provides updated information regarding an incident or situation; unlikely to require immediate

Updated Guidance for the use of CSL's 2009 H1N1 Monovalent Vaccine November 12, 2009

On November 11, 2009, the FDA expanded the approved use of CSL's seasonal and 2009 H1N1 monovalent influenza vaccines to include children aged 6 months and older. Both vaccines had previously been approved only for use in adults, aged 18 years and older. The immediate affect on the national H1N1 flu vaccination program is that CSL's pre-filled syringe and multi-dose vial formulations can now be used in a substantially broader range of ages. CDC is making a programmatic recommendation and issuing clarifying guidance on use of CSL H1N1 vaccine that takes into account practical logistical considerations of allocation, ordering, and distribution of vaccine and ancillary supply kits.

Recommendation

Both the CSL H1N1 pre-filled syringe and multi-dose vial vaccine formulations should be reserved for individuals aged 3 years and older if alternative products are available.

Rationale

Pre-filled syringe presentation: Using the CSL H1N1 pre-filled syringe vaccine in children aged 6-35 months would result in wastage of one dose per syringe. Since children aged 6-35 months would only require a half dose of this vaccine, only half of the contents of the syringe could be used. Transfer of some or all of the contents of one syringe to another syringe is not permissible nor is using the same syringe to administer the latter half dose to another individual. Therefore, the only option is to discard the remaining half dose. With the current limited supply and availability of vaccine nationwide, CDC discourages using a half dose of CSL H1N1 pre-filled syringe vaccine on a child aged 6-35 months and discarding the remaining half dose.

Multi-dose vial presentation: While CSL's H1N1 multi-dose vial vaccine is now licensed for use in individuals aged 6 months and older, CDC is treating this formulation as being for use in individuals aged 3 years and older for the purpose of allocating and ordering vaccine and ancillary supply kits (the multi-dose vial kits used for all H1N1 vaccines contain supplies that are intended for use in children and adults aged 3 years and older). CSL H1N1 multi-dose vial vaccine formulation will continue to be ordered as a 100 dose (0.5mL per dose) minimum order size and CDC will allocate one multi-dose vial ancillary supply kit for each 100 doses of multi-dose vial vaccine. If providers choose to administer half doses of the multi-dose vial formulation to children aged 6-35 months, they will effectively be short half the number of needle/syringe units, alcohol pads, vaccination record cards and sharps containers. Providers will be required to use their own ancillary supplies to make up the difference and print out additional shot cards from the CDC website (http://www.cdc.gov/flu/freeresources/2009-10/pdf/influenza_record_card2009.pdf). This situation also applies to the Sanofi Pasteur multi-dose vial vaccine formulation that is licensed for individuals aged 6 months and older.

If you have any questions or need clarification on this guidance please contact the Montana Immunization Program at 444-5580.
