Consultative Clinical and Therapeutic Services are services that assist the unpaid and/or paid caregivers in carrying out individual service plans and are necessary to improve the individual’s independence and inclusion in the community. The service is geared towards individuals with traumatic brain injuries or more complex disabilities that require a more clinical approach and specialized interventions. Consultation activities are to be provided by professionals in psychiatry, psychology, neuro-psychology, physiatry, communication, behavior management, or other specializing in specific intervention modalities.

The service may include:

1. clinical evaluations by these professionals;
2. development of supplemental home/community treatment plan which is incorporated into the individual's service plan;
3. training and technical assistance to implement the treatment;
4. monitoring the treatment; and
5. one-to-one consultation and support for paid and non-paid caregivers.

Professional will work closely with case managers to ensure that treatment plans are implemented and followed.

An entity inclusive of its staff, providing consultative clinical and therapeutic services must be qualified generally, to provide the services, and specifically, to meet each recipient’s defined needs.
