

2024 Safety Science Training

What is Safety Science and Why is Our Developmental Disabilities Program Excited about It?

The Montana Developmental Disabilities Program is pleased to offer this training series to Self-Direct Providers and Families at no cost.

Direct support staff are vital to quality care in Montana's group homes, home health agencies, and nursing homes. How can employers (and families) better support them? Can we improve retention, in turn raising quality of care? Join us for a **VIRTUAL** presentation by Collaborative Safety to learn about Safety Science.

When?

September 18th 1:00PM to 4:00PM

Where?

Join Zoom Meeting: <https://collaborativesafety.zoom.us/j/83489418082>

Meeting ID: 834 8941 8082

Who should attend?

Montanans receiving care from DSPs, PCAs, or CNAs, family members/guardians, case managers, care agency employers and employees, and anyone interested in learning more about Safety Science.

We'll learn about Safety Science's role in:

- Moving from a culture of blame to systems accountability. When the system is accountable for learning and improvement, outcomes improve for those served.
- Improving workforce retention. When the workforce is stable and supported, members are better served, and outcomes improve.
- The role that families and individuals receiving services will play in the Systemic Incident Review Process.
