## Geriatric Early Trauma Activation Guidelines

A geriatric trauma victim is a person  $\geq 65$  years of age, exhibiting one of more of the following:

### Physiologic Criteria:

- a. GCS score ≤13 with a known or suspected traumatic head/brain injury (defined as an indication that the brain has suffered an injury caused by an external force) including, but not limited to:
  - i. Decrease in level of consciousness
  - ii. Unequal pupils
  - iii. Blurred vision
  - iv. Severe or persistent headache
  - v. Nausea or vomiting
  - vi. Change in neurological status
- b. Systolic BP <110 mmHg or absent radial pulse with carotid pulse present

#### **Anatomic Criteria:**

- c. Known or suspected proximal long bone fracture sustained in a motor vehicle crash
- d. Multiple body regions injured

#### Mechanism of Injury Criteria:

- e. Fall from <u>any</u> height, including standing falls, WITH evidence of traumatic head/brain injury (see above)
- f. Pedestrian struck by motor vehicle

#### **Special Considerations:**

- g. Anticoagulation agents
- h. Co-morbidities: diabetes, cardiac disease (CHF/HTN/arrhythmias), pulmonary disease (COPD), clotting disorder, immunosuppressive disorder or required dialysis

# MAINTAIN A HIGH INDEX OF SUSPICION FOR INJURY AND PROMPTLY CONSIDER THE NEED TO TRANSFER TO A HIGHER LEVEL OF CARE
