

MONTANA FACTS

- Smoking remains a major risk factor for cancer and heart disease, two of the leading causes of death among Montana American Indians.¹ Current cigarette smoking prevalence for American Indian adults is **25%**.²
- A concerning **20%** of pregnant American Indian women smoke while pregnant, increasing the risk of low-birth rate babies and SIDS.³
- **45%** of American Indian high school students have tried cigarettes and **23%** tried them before the age of 13.⁴
- E-cigarettes are the most commonly used nicotine product among youth. **40%** of American Indian youth currently use e-cigarettes and **99%** of these users choose a flavored e-cigarette product.⁴
- **42%** of American Indian adult smokers have made a quit attempt in the past 12 months.² Decreasing cigarette use among American Indian adults aids in de-normalizing commercial tobacco use, which can help reduce youth tobacco use.
